Department of Transfusion Medicine (Blood Bank)

BLOOD GROUPING, RH TYPING & ANTIBODY SCREEN (TYPE & SCREEN)
Specimen-Blood

Blood Group & Rh Typing (Agglutination by gel/tube technique)

Blood Group & Rh typing B Rh(D) Positive

Antibody Screening (Microtyping in gel cards using reagent red cells)

Final Antibody Screen Result Negative

Technical Note:

ABO grouping and Rh typing is done by cell and serum grouping by microplate / gel technique. Antibody screening is done using a 3 cell panel of reagent red cells coated with Rh, Kell, Duffy, Kidd, Lewis, P, MNS, Lutheran and Xg antigens using gel technique.

BIOCHEMISTRY

Specimen: EDTA Whole blood

HbA1c (Glycosylated Hemoglobin) 5.8 %

As per American Diabetes Association (ADA) 2010
[4.0-6.5]

HbA1c in %

Non diabetic adults : < 5.7 %

Prediabetes (At Risk) : 5.7 % - 6.4 %

Diabetic Range : > 6.5 %

Estimated Average Glucose (eAG) 120 mg/dl

Use :

1. Monitoring compliance and long-term blood glucose level control in patients with diabetes.
2. Index of diabetic control (direct relationship between poor control and development of complications).
3. Predicting development and progression of diabetic microvascular complications.

Limitations :

1. A1C values may be falsely elevated or decreased in those with chronic kidney disease.
2. False elevations may be due in part to analytical interference from carbamylated hemoglobin formed in the presence of elevated concentrations of urea, with some assays.
3. False decreases in measured A1C may occur with hemodialysis and altered red cell turnover, especially in the setting of erythropoietin treatment

diseases and determine approximate risks for cardiovascular disease, certain forms of pancreatitis and other diseases.

| Test Name | Result | Unit | Biological Ref. Interval |
|--------------------------|--------|-------|--------------------------|
| TOTAL PSA, Serum (ECLIA) | 0.710 | ng/mL | [<3.500] |

Note : PSA is a glycoprotein that is produced by the prostate gland. Normally, very little PSA is secreted in the blood. Increases in glandular size and tissue damage caused by BPH, prostatitis, or prostate cancer may increase circulating PSA levels.

Caution : Serum markers are not specific for malignancy, and values may vary by method.

Immediate PSA testing following digital rectal examination, ejaculation, prostate massage urethral instrumentation, prostate biopsy may increase PSA levels.

Some patients who have been exposed to animal antigens, may have circulating anti-animal antibodies present. These antibodies may interfere with the assay reagents to produce unreliable results.

BIOCHEMISTRY

Technical Notes:

Liver function test aids in diagnosis of various pre hepatic, hepatic and post hepatic causes of dysfunction like hemolytic anemia's, viral and alcoholic hepatitis and cholestasis of obstructive causes.

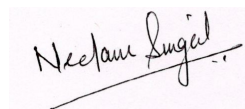

| Test Name | Result | Unit | Biological Ref. Interval |
|-----------------------------------|--------|-----------------|--------------------------|
| KIDNEY PROFILE (Serum) | | | |
| BUN (Urease/GLDH) | 10.00 | mg/dl | [6.00-20.00] |
| SERUM CREATININE (Jaffe's method) | 0.90 | mg/dl | [0.80-1.60] |
| SERUM URIC ACID (Uricase) | 5.9 | mg/dl | [3.5-7.2] |
| SERUM CALCIUM (NM-BAPTA) | 9.36 | mg/dl | [8.00-10.50] |
| SERUM PHOSPHORUS (Molybdate, UV) | 3.2 | mg/dl | [2.5-4.5] |
| SERUM SODIUM (ISE) | 140.0 | mmol/l | [134.0-145.0] |
| SERUM POTASSIUM (ISE) | 4.19 | mmol/l | [3.50-5.20] |
| SERUM CHLORIDE (ISE Indirect) | 102.3 | mmol/L | [95.0-105.0] |
| eGFR | 95.8 | ml/min/1.73sq.m | [>60.0] |

Technical Note

eGFR which is primarily based on Serum Creatinine is a derivation of CKD-EPI 2009 equation normalized to 1.73 sq.m BSA and is not applicable to individuals below 18 years. eGFR tends to be less accurate when Serum Creatinine estimation is indeterminate e.g. patients at extremes of muscle mass, on unusual diets etc. and samples with severe Hemolysis / Icterus / Lipemia.

HAEMATOLOGY

ERYTHROCYTE SEDIMENTATION RATE (Automated) Specimen-Whole Blood

ESR 9.0 mm/1sthour [0.0-12.0]

Interpretation :

Erythrocyte sedimentation rate (ESR) is a non-specific phenomena and is clinically useful in the diagnosis and monitoring of disorders associated with an increased production of acute phase reactants (e.g. pyogenic infections, inflammation and malignancies). The ESR is increased in pregnancy from about the 3rd month and returns to normal by the 4th week postpartum.

ESR is influenced by age, sex, menstrual cycle and drugs (eg. corticosteroids, contraceptives).

It is especially low (0 -1mm) in polycythemia, hypofibrinogenemia or congestive cardiac failure and when there are abnormalities of the red cells such as poikilocytosis, spherocytosis or sickle cells.

| Test Name | Result | Unit | Biological Ref. Interval |

CLINICAL PATHOLOGY

URINALYSIS--Routine urine analysis assists in screening and diagnosis of various metabolic , urological, kidney and liver disorders

Protein: Elevated proteins can be an early sign of kidney disease. Urinary protein excretion can also be temporarily elevated by strenuous exercise, orthostatic proteinuria, dehydration, urinary tract infections and acute illness with fever

Glucose: Uncontrolled diabetes mellitus can lead to presence of glucose in urine.

Other causes include pregnancy, hormonal disturbances, liver disease and certain medications.

Ketones: Uncontrolled diabetes mellitus can lead to presence of ketones in urine.

Ketones can also be seen in starvation, frequent vomiting, pregnancy and strenuous exercise.

Blood: Occult blood can occur in urine as intact erythrocytes or haemoglobin, which can occur in various urological, nephrological and bleeding disorders.

Leukocytes: An increase in leukocytes is an indication of inflammation in urinary tract or kidneys. Most Common cause is bacterial urinary tract infection.

Nitrite: Many bacteria give positive results when their number is high. Nitrite concentration during infection increases with length of time the urine specimen is retained in bladder prior to collection.

pH: The kidneys play an important role in maintaining acid base balance of the body. Conditions of the body producing acidosis/alkalosis or ingestion of certain type of food can affect the pH of urine.

Specific gravity: Specific gravity gives an indication of how concentrated the urine is. Increased Specific gravity is seen in conditions like dehydration, glycosuria and proteinuria while decrease Specific gravity is seen in excessive fluid intake, renal failure and diabetes insipidus.

Bilirubin: In certain liver diseases such as biliary obstruction or hepatitis, bilirubin gets excreted in urine.

Urobilinogen: Positive results are seen in liver diseases like hepatitis and cirrhosis and in case of hemolytic anemia.

EXERCISE STRESS TEST REPORT (TMT)

Findings:

Baseline ECG NSR
Premedications Nil

| | | | |
|------------------------|-------------------|-------------------|------|
| Protocol | Bruce | MPHR | 165 |
| Duration of exercise | 09 Minutes 00 sec | 85% OF MPHR | 140 |
| Reason for termination | THR achieved | METS | 10.1 |
| Peak achieved | 146 | %of MPHR achieved | 89% |

| Stage | Time | Heart rate (bpm) | BP (mmHg) | ECG(ST/T changes/arrhythmia) | Symptom |
|----------------|-------------|-------------------------|------------------|-------------------------------------|----------------|
| Control | 0.00 | 83 | 130/80 | No ST-T changes | Nil |
| Stage I | 3.00 | 111 | 130/80 | No ST-T changes | Nil |
| Stage II | 3.00 | 126 | 140/80 | No ST-T changes | Nil |
| Stage III | 3.00 | 146 | 150/80 | No ST-T changes | Nil |
| Recovery | 3.00 | 100 | 140/80 | No ST-T changes | Nil |

Result:

- Normal heart rate and BP response.
- No significant ST-T changes were seen during exercise or recovery period.
- No symptomatic of angina/ chest pain during the test
- No significant arrhythmia during the test

FINAL IMPRESSION.

- Exercise stress test is **Negative** for reversible myocardial Ischemia.
- Good effort tolerance.

USG WHOLE ABDOMEN

Results:

Liver is normal in size (~15.3 cm) **and shows grade I fatty changes**. No focal intra-hepatic lesion is detected. Intra-hepatic biliary radicals are not dilated. Portal vein is normal in calibre.

Gall bladder appears echofree with normal wall thickness.

Common bile duct is normal in calibre.

Pancreas - Visualized part is normal.

Spleen is normal in size (~10.8 cm) and echopattern.

Both kidneys are normal in position, size (RK ~9.6 x 4.4 cm and LK ~9.8 x 4.4 cm) and outline. Cortico-medullary differentiation of both kidneys is maintained. Central sinus echoes are compact. No focal lesion or calculus seen. Bilateral pelvicalyceal systems are not dilated.

Urinary bladder is normal in wall thickness with clear contents. No significant intra or extraluminal mass is seen.

Prostate is borderline enlarged in size. It measures approx. 25.7 cc in volume.

No significant free fluid is detected.

IMPRESSION:

- **Grade I fatty enlarged liver.**
- **Borderline prostatomegaly.**

Please correlate clinically.

X-RAY CHEST - PA VIEW

Results:

Few fibrotic opacity is seen in left lung apex.

Rest of the bilateral lung fields appear clear however shows prominent broncho vascular markings.

Both hilar shadows appear normal.

Cardiothoracic ratio is within normal limits.

Both hemidiaphragmatic outlines appear normal.

Both costophrenic angles are clear.

Kindly correlate clinically.

Dr. Prerna Malhotra MBBS, MD, DMC No: 90870
