BIOCHEMISTRY

HbA1c (Glycosylated hemoglobin)

HbA1c (GLYCOSYLATED Hb)	5.2	%	4.2 - 6.4
<small>HPLC</small>			
MEAN BLOOD GLUCOSE	102.5	mg/dl	60 - 120

Note:

1. Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient who is recently under good control may still have a high concentration of HbA1c.
2. Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targeting a goal of < 7.0 % may not be appropriate.

Comments:

HbA1c provides an index of average blood glucose levels over the past 8 - 12 weeks and is a much better indicator of long term glycemic control as compared to blood and urinary glucose determinations. ADA criteria for correlation between HbA1c & Mean plasma glucose levels.
