

## MEDICAL EXAMINATION REPORT

Date – 09/11/2024

**Name :** Santosh Bhairavkar

**Age :** 42 years

**Gender :** Male

**Temperature – 98°F Height – 168 cms Weight - 64 kg BMI – 22.7 %**

**History :** Nil significant history.

**Past history :** Not tested positive for COVID-19 till date.

2 Doses Vaccinated.

**Personal history :** Nil significant history.

**Neurological history :** Nil significant history

**Menstrual history :** N.A.

**Family history :** Nil significant history.

**Allergic history :** Nil significant history.

**Nature of work :** Sedantary.

**Occupational history :** Trader [Self Buisness]

**Ongoing treatment :** Nil significant history

**General examination :** No Pallor, jaundice, clubbing, cyanosis, lymphadenopathy ,pedal oedema.

**Built :** Normal

**Nutrition :** Normal

**Pulse :** 76 bpm

**B.P:** 110/70 mmHg

**RS:** Clear,NAID

## LABORATORY TEST REPORT

Patient Name **Mr SANTOSH BHAIRAWKAR**

Age : 47 Year(s) Gender : Male

Sample ID : 20834755

Sample Type : Serum

Patient ID : 2473875

Ref. Doctor :

Ref. Customer :

Lab Code : CPC-GO-020

Sample Collection Date : 2024-11-09 10:00

Registration Date : 2024-11-09 13:15

Approved Date : 2024-11-09 18:29

### CLINICAL BIOCHEMISTRY

| Test Description   | Result | Units | Biological Reference Ranges |
|--|--------|-------|-----------------------------|
| Prostate Specific Antigen (PSA Total)<br><small>(Nuclear Green-Fluorescence)</small> | 0.64   | ng/mL | 0-4                         |

### INTERPRETATION

- This is a recommended test for detection of prostate cancer along with Digital Rectal Examination (DRE) in males above 50 years of age.
- False negative / positive results are observed in patients receiving prostate hormonal therapies for diagnosis or therapy.
- PSA levels may appear consistently elevated / depressed due to the interference by heterophilic antibodies & nonspecific protein binding.
- Immediate PSA testing following digital rectal examination, ejaculation, prostate massage, indwelling catheterization, ultrasonography and needle biopsy of prostate is not recommended as they falsely elevate levels.
- PSA values regardless of levels should not be interpreted as absolute evidence of the presence or absence of disease. All values should be correlated with clinical findings and results of other investigations.
- Sites of Nonprostatic PSA production are breast epithelium, salivary glands, parathyroid & anal glands, cells of male urethra & breast milk.
- Physiological decrease in PSA level by sera has been observed in hospitalized / sedentary patients either due to supine position or suspended sexual activity.

#### Recommended Testing Intervals

- Pre-operatively (Baseline)
- 2-4 days post-operatively
- Prior to discharge from hospital
- Monthly followup if levels are high or show a rising trend

#### Clinical Use

- Aid in the early detection of prostate cancer when used in conjunction with
- Digital rectal examination in males more than 50 years of age and in those with two or more affected first degree relatives
- Followup and management of prostate cancer patients
- Detect metastatic or persistent disease in patients following surgical or medical treatment of Prostate cancer

#### Increased Levels

- Prostate cancer
- Benign Prostatic Hyperplasia
- Prostatitis
- Genitourinary infections

### CLINICAL BIOCHEMISTRY

| Test Description   | Result | Units  | Biological Reference Ranges |
|--|--------|--------|-----------------------------|
| <b>Thyroid Profile I</b>   |        |        |                             |
| T3-Total, Tri Iodothyronine (TT3)<br><small>(Reference Interval: 0.8-1.8)</small>    | 134.62 | ng/dl  | 60 - 200                    |
| T4-Total, Thyroxine (TT4)<br><small>(Reference Interval: 5.0-12.0)</small>           | 8.1    | ug/dl  | 4.6 - 10.5                  |
| Thyroid Stimulating Hormone, (TSH)<br><small>(Reference Interval: 0.01-0.05)</small> | 2.43   | uIU/ml | 0.37-5.50                   |

### Thyroid Function Test Interpretation

The thyroid gland is not functioning properly due to one of a variety of disorders. When introduced or decreased amounts of thyroid hormones may result. When TSH concentrations are increased, the thyroid will make and release inappropriate amounts of T4 and T3 and the person may experience symptoms associated with hyperthyroidism. If there is decreased production of thyroid hormones, the person may experience symptoms of hypothyroidism.

The following table summarizes some examples of typical test results and their potential meaning.

| TSH    | Total T4       | Total T3       | Conditions                          |
|--------|----------------|----------------|-------------------------------------|
| Normal | Normal         | Normal         | None                                |
| Low    | High           | High           | Hyperthyroidism                     |
| High   | Normal         | Normal         | Mild (subclinical) hypothyroidism   |
| High   | Low            | Low or normal  | Hypothyroidism                      |
| Low    | Normal         | Normal         | Mild (subclinical) hyperthyroidism  |
| Low    | High or normal | High or normal | Hypothyroidism                      |
| Low    | Low or normal  | Low or normal  | Primary (secondary) hypothyroidism  |
| Normal | High           | High           | Thyroid hormone resistance syndrome |

**Note:**

- The above test results alone are not diagnostic but will prompt a health practitioner to perform additional testing to investigate the cause of the excess or deficiency and thyroid disorder. An example, the most common cause of hyperthyroidism is Graves disease and the most common cause of hypothyroidism is Hashimoto thyroiditis.
- Recommended test for T3 and T4 is unbound fraction or free levels as it is metabolically active.
- Physiological rise in Total T3 / T4 levels is seen in pregnancy and in patients on steroid therapy.

Value of EF : 60.00 %

### Speckle Tracking

Average peak systolic strain is : -21.60 %  
Reduced peak systolic strain over

## Special Observation

Nil

## Impressions

Cardiac chambers are normal in dimension and function  
Great vessels are normal in size and function

No Diastolic Dysfunction  
No Regional wall motion abnormality noted  
Normal RV Function  
Normal PA pressures  
No vegetation  
No pericardial effusion noted  
No Intracavitary clots seen  
Normal resting left ventricular systolic function with Ejection Fraction 66%

Trivial aortic regurgitation  
Calcification of aortic Annulus  
Trivial mitral regurgitation  
Calcification of mitral Annulus  
Trivial tricuspid regurgitation

## Conclusions

Degenerative changes

## Doctor's Comments / Advice

Medical Line of Management

**Dr. Digambar Naik**

M.D. (Med) D.O.L.H., F.I.A.C., D.H.A., F.A.I.M.P. (Cardiology)

KMC registration : 165058

Name : BHARADWAJ SANTOSH

Gender : Others

Height : 1.68 m(s)

Weight : 54.0 Kg(s)

Date of Echo : 09/11/2024 12:14:25 PM

Reason for Echo : Routine checkup

Clinic Observations :

Date of Birth : 20/11/1981

BSA : 1.72

BMI : 23.68

Age : 42 Year(s), 11 Month(s), 20 Day(s)

BP : 120/80 mmHg

Date of Report : 09/11/2024

Referred By : None

Examined By : Dr. Digambar Naik

Case ID : 4335

## Critical Image

Name : BHAI RAUKAR SANTOSH

Gender : Others

Height : 1.68 cm(s)

Weight : 64.0 Kg(s)

Date of Echo : 09/11/2024 12:14:25 PM

Reason for Echo : Routine checkup

Clinic Observations :

Date of Birth : 20/11/1981

BSA : 1.73

BMI : 22.68

Age : 42 Year(s), 11 Month(s), 20 Day(s)

BP : 120/80 mmHg

Date of Report : 09/11/2024

Referred By : None

Examined By : Dr. Digambar Naik

Case ID : 4315

## Heart Anatomy

Name : BHABRAKAR SANJOSH

Gender : Others

Height : 1.68 cm(s)

Weight : 64.0 Kg(s)

Date of Echo : 09/11/2024 12:14 23 PM

Reason for Echo : Routine checkup

Clinic Observations :

Date of Birth : 20/11/1981

BSA : 1.75

BMI : 22.68

Age : 42 Year(s), 11 Month(s), 20 Day(s)

BP : 120/80 mmHg

Date of Report : 09/11/2024

Referred By : None

Examined By : Dr. Dignambar Nark
