High ESR is not diagnostics of any disease but just indicative of some inflammatory process. ESR is to be used to monitor outcome of therapy. Microcytic anemia can increase ESR. High ESR can also be seen in apparently healthy adults.

THYROID PANEL, SERUMTriiodothyronine T3 , is	s a thyroid hormone. I	t affects almost ever	y physiological process in the body, including

growth, development, metabolism, body temperature, and

heart rate. Production of T3 and its prohormone thyroxine (T4) is activated by thyroid-stimulating hormone (TSH), which is released from the pituitary gland. Elevated

concentrations of T3, and T4 in the blood inhibit the production of TSH.

Thyroxine T4, Thyroxine's principal function is to stimulate the metabolism of all cells and tissues in the body. Excessive secretion of thyroxine in the body is hyperthyroidism,

and deficient secretion is called hypothyroidism. Most of the thyroid hormone in blood is bound to transport proteins. Only a very small fraction of the circulating hormone is

free and biologically active.

In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low. Below mentioned are the guidelines for Pregnancy related reference ranges for Total T4, TSH & Total T3

Levels in	TOTAL T4	TSH3G	TOTAL T3
Pregnancy	(µg/dL)	(µIU/mL)	(ng/dL)
First Trimester	6.6 - 12.4	0.1 - 2.5	81 - 190
2nd Trimester	6.6 - 15.5	0.2 - 3.0	100 - 260
3rd Trimester	6.6 - 15.5	0.3 - 3.0	100 - 260
Below mentioned are th	ne guidelines for age	related reference r	anges for T3 and T4.
Т3		T4	
(ng/dL)		(µg/dL)	
New Born: 75 - 260		1-3 day: 8.2 - 19.9	9

. 1 Week: 6.0 - 15.9

NOTE: TSH concentrations in apparently normal euthyroid subjects are known to be highly skewed, with a strong tailed distribution towards higher TSH values. This is well

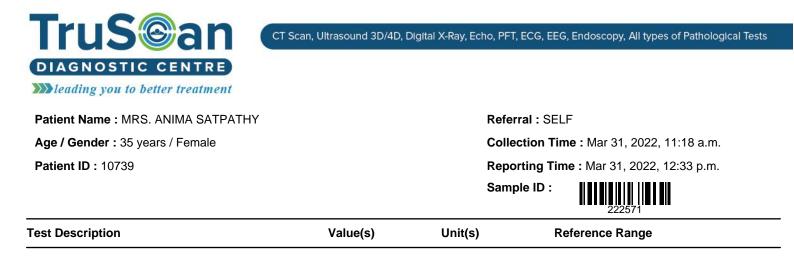

documented in the pediatric population including the infant age group.

Kindly note: Method specific reference ranges are appearing on the report under biological reference range

Patient ID : 10739		Reporting Time : Mar 31, 2022, 12:33 p.m		
			Sample ID : 222571	
Test Description	Value(s)	Unit(s)	Reference Range	
HbA1C				
HbA1c (GLYCOSYLATED HEMOGLOBIN), BLOOD [5.0	%	Non-diabetic: < 5.7	
(HPLC, NGSP certified)]			Pre-diabetics: 5.7 - 6.4	
			Diabetics: $> $ or $= 6.5$	
			ADA Target: 7.0	
			Action suggested: > 8.0	
MEAN PLASMA GLUCOSE [HB VARIANT (HPLC)]	97.0		< 116.0	

Note:

1. Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient who is recently under good control may still have a high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled .

Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targeting a goal of < 7.0 % may not be appropriate.

Comments

HbA1c provides an index of average blood glucose levels over the past 8 - 12 weeks and is a much better indicator of long term glycemic control as compared to blood and urinary glucose determinations.

ADA criteria for correlation between HbA1c & Mean plasma glucose levels.

Mean Plasma Glucose (mg/dL)
126
154
183
212
240
269
298

Interpretation

As per American Diabetes Association (ADA)		
Reference Group	HbA1c in %	
Non diabetic adults >=18 years	<5.7	
At risk (Prediabetes)	5.7 - 6.4	
Diagnosing Diabetes	>= 6.5
