BLOOD GROUP, ABO & RH TYPING

Blood Group, ABO & RH Typing

ABO Group : A
 RH Factor : Negative

The test to determine your blood group is called ABO typing. Your blood sample is mixed with antibodies against type A and B blood. Then, the sample is checked to see whether or not the blood cells stick together. If blood cells stick together, it means the blood reacted with one of the antibodies.

Rhesus (Rh) factor is an inherited protein found on the surface of red blood cells. If your blood has the protein, you're Rh positive. If your blood lacks the protein, you're Rh negative.

SGPT (ALT)
 Value: 16 U/L
 Reference Interval: 00 - 40 U/L

Interpretation
 SGPT exists predominantly in the liver and leaks into the bloodstream when produced in excess. The SGPT normal range is about 0 - 28 units per liter of blood serum. Thus, very high level of SGPT in the blood can be an indication of damage or problems related to the liver.

Serum Creatinine
 Value: 0.79 mg/dL
 Reference Interval: 0.60 - 1.40 mg/dL

Serum Urea
 Value: 28.9 mg/dL
 Reference Interval: 10 - 40 mg/dL

Total Cholesterol
 Value: 170 mg/dL
 Reference Interval: 120 - 200 mg/dL
