### ULTRASOUND OF ABDOMEN & PELVIS

The liver is normal in size and shows normal echotexture. There is no evidence of any focal hepatic lesion. The hepatic and portal veins are normal. There is no intrahepatic biliary dilatation.

The gall bladder is adequately distended. There is no evidence of any biliary calculi. No gallbladder wall thickening or pericholecystic fluid is noted.

The CBD is not dilated.

The pancreas shows normal lobulations. There is no calcification or duct dilatation

Spleen is normal in size, shape and echotexture.

Both kidneys are normal in size, shape and echotexture.

A 5.2 mm sized calculus is seen in the lower calyx of right kidney and 3.5 mm sized calculus is seen in the lower calyx of left kidney.

There is no evidence of hydronephrosis and cortical scarring in either kidney.

There is no evidence of ascites.

Gas filled bowel loops are noted in lower abdomen.

The urinary bladder is partially distended.

The prostate is normal in size and echotexture.

#### **Impression:**

- **Bilateral renal non-obstructive calculus.**
- **No other obvious significant abnormality noted in present scan.**

**Suggest: Clinical and CT KUB correlation.**

**Dr. Abhishek Yadav**  
**Consulting Radiologist**

*(Investigations have their limitations. Solitary pathological/ Radio-logical and other investigations never confirm the final diagnosis. They only help in diagnosing the disease in correlation to clinical symptoms and other related tests. Please interpret accordingly.)*

### Interpretation

The Patient Exercised according to Bruce Protocol for 0:09:27 achieving a work level of 10.6 METS.  
 Resting Heart Rate, initially 83 bpm rose to a max. heart rate of 163bpm (86% of Predicted Maximum Heart Rate).  
 Resting Blood Pressure of 130/80 mmHg, rose to a maximum Blood Pressure of 150/90 mmHg  
 Good effort tolerance.  
 THR 86% achieved with no ST changes during test.  
 Stress test is Negative for inducible ischaemia

### X-RAY CHEST PA VIEW

Both lung fields show equal translucency and vasculature.

Pleural spaces are clear.

The cardiac size is normal.

The domes of diaphragm are normal in position & show smooth outline.

The bony parts are normal.

#### Impression:

- **No obvious significant abnormality is seen.**

Suggest: Clinical correlation.

**Dr. Abhishek Yadav**  
**Consultant Radiologist**

Note: Investigations have their limitations. Solitary radiological investigations never confirm the final diagnosis. They only help in diagnosing the disease in correlation to clinical symptoms and other related tests. X-ray is known to have inter-observer variations. Further/ follow up imaging may be needed in some cases for confirmation/ exclusion of diagnosis. Not all fractures may be visible in given X-ray views; hence a clinical correlation is suggested in cases of injury with swelling and restricted movements. Please interpret accordingly.

 DOB/Age : 30 years      Reported : Apr 27, 2024, 09:28 p.m.      Client Address : GHATKOPAR  
 Gender : Male      Ref. Doctor : SELF

Test Description	Value(s)	Reference Range
Absolute Neutrophil Count* (Calculated)	3.50	* 10 <sup>9</sup> /L      2.0 - 7.0
Absolute Lymphocyte Count* (Calculated)	2.96	* 10 <sup>9</sup> /L      1-3
Absolute Monocyte Count* (Calculated)	0.53	* 10 <sup>9</sup> /L      0.2-1.0
Absolute Eosinophil Count* (Calculated)	<b>0.53</b>	* 10 <sup>9</sup> /L      0.0-0.5
Absolute Basophils Count* (Calculated)	<b>0.08</b>	* 10 <sup>9</sup> /L      0.1-0.2
WBC	Eosinophilia	
<b>Platelets</b> (Whole, Blood)		
Platelet Count* (Electrical Impedence)	277	10 <sup>3</sup> /ul      150 - 450
Mean Platelet Volume (MPV)* (Electrical Impedence)	7.8	fL      7.2 - 11.7
Platelet Morphology	Adequate on smear	
PCT* (Calculated)	0.215	%      0.2 - 0.5
PDW* (Calculated)	16.7	%      9.0 - 17.0

Tests done on Automated Five Part Cell Counter. (WBC, RBC, Platelet count by impedance method, colorimetric method for Hemoglobin, WBC differential by flow cytometry using laser technology other parameters are calculated). All Abnormal Haemograms are reviewed confirmed microscopically.

### ULTRASOUND OF ABDOMEN & PELVIS

The liver is normal in size and shows normal echotexture. There is no evidence of any focal hepatic lesion. The hepatic and portal veins are normal. There is no intrahepatic biliary dilatation.

The gall bladder is adequately distended. There is no evidence of any biliary calculi. No gallbladder wall thickening or pericholecystic fluid is noted.

The CBD is not dilated.

The pancreas shows normal lobulations. There is no calcification or duct dilatation

Spleen is normal in size, shape and echotexture.

Both kidneys are normal in size, shape and echotexture.

A 5.2 mm sized calculus is seen in the lower calyx of right kidney and 3.5 mm sized calculus is seen in the lower calyx of left kidney.

There is no evidence of hydronephrosis and cortical scarring in either kidney.

There is no evidence of ascites.

Gas filled bowel loops are noted in lower abdomen.

The urinary bladder is partially distended.

The prostate is normal in size and echotexture.

#### **Impression:**

- **Bilateral renal non-obstructive calculus.**
- **No other obvious significant abnormality noted in present scan.**

**Suggest: Clinical and CT KUB correlation.**

**Dr. Abhishek Yadav**  
**Consulting Radiologist**

*(Investigations have their limitations. Solitary pathological/ Radio-logical and other investigations never confirm the final diagnosis. They only help in diagnosing the disease in correlation to clinical symptoms and other related tests. Please interpret accordingly.)*

### X-RAY CHEST PA VIEW

Both lung fields show equal translucency and vasculature.

Pleural spaces are clear.

The cardiac size is normal.

The domes of diaphragm are normal in position & show smooth outline.

The bony parts are normal.

#### **Impression:**

- **No obvious significant abnormality is seen.**

Suggest: Clinical correlation.

**Dr. Abhishek Yadav**  
**Consultant Radiologist**

Note: Investigations have their limitations. Solitary radiological investigations never confirm the final diagnosis. They only help in diagnosing the disease in correlation to clinical symptoms and other related tests. X-ray is known to have inter-observer variations. Further/ follow up imaging may be needed in some cases for confirmation/ exclusion of diagnosis. Not all fractures may be visible in given X-ray views; hence a clinical correlation is suggested in cases of injury with swelling and restricted movements. Please interpret accordingly.
