**BLOOD GROUP, ABO & RH TYPING**

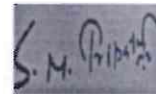

**Blood Group, ABO & RH Typing**

<b>ABO Group</b>	B
<b>RH Factor</b>	Positive

The test to determine your blood group is called ABO typing. Your blood sample is mixed with antibodies against type A and B blood. Then, the sample is checked to see whether or not the blood cells stick together. If blood cells stick together, it means the blood reacted with one of the antibodies.

Rhesus (Rh) factor is an inherited protein found on the surface of red blood cells. **If your blood has the protein, you're Rh positive. If your blood lacks the protein, you're Rh negative.**
