**Findings:** Exercise Time : 07:59 mins  
 Max HR attained : 175 bpm 90 % of Target 194 bpm  
 Max BP : 140/100mmHg  
 Max Workload attained : 9.5 METs ( Good Effort Tolerance )  
 Reason for Test Termination: Patient Not Comfortable

No significant ST segment changes noted during exercise or recovery stages.  
 No Angina / Arrhythmia / S3 / Murmur  
 Final Impression : Test is negative for inducible ischaemia.

**BLOOD GROUP****Blood Group, ABO & RH Typing**

Investigation	Observed Value	Biological Reference Interval	Unit
<b>BLOOD GROUP, ABO &amp; RH TYPING</b>			
ABO Group	AB		
RH Factor	POSITIVE		

The test to determine your blood group is called ABO typing. Your blood sample is mixed with antibodies against type A and B blood. Then, the sample is checked to see whether or not the blood cells stick together. If blood cells stick together, it means the blood reacted with one of the antibodies.

Rhesus (Rh) factor is an inherited protein found on the surface of red blood cells. **If your blood has the protein, you're Rh positive. If your blood lacks the protein, you're Rh negative.**

MO : 8875376755

Address :

**HBA1C**

Investigation	Observed Value	Biological Reference Interval	Unit
Glycosylated Hemoglobin(GHb/HbA1c)	4.86	4.0 - 6.0	mg/dL
Mean Blood Glucose	92.78	90 - 210 90-120 Excellent Control 121-150 Good Control 151-180 Average Control 181-210 Action Suggested >210 Panic Value	mg/dL

**Comment**

- HbA1c is an indicator of glycemic control. HbA1c represents average Glycemia over the past six to eight weeks. Glycation of Hemoglobin occurs over the entire 120 day life span of the Red Blood Cell, but within this 120 days. Clinical studies suggest that a patient in stable control will have 50% of their HbA1c formed in the month before sampling, 25% in the month before that, and the remaining 25% in months two to four.
- Mean Plasma Glucose mg/dL =  $28.7 \times A1C - 46.7$ . Correlation between HbA1c and Mean Plasma Glucose (MPG) is not "perfect" but rather only this means that to predict or estimate average glucose from HbA1c or vice-versa is not "perfect" but gives a good working ballpark estimate.
- Afternoon and evening results correlate more closely to HbA1c than morning results, perhaps because morning fasting glucose levels vary much more than daytime Glucose levels, which are easier to predict and control. As per IFCC recommendations 2007, HbA1c being reported as above maintaining traceability to both IFCC (mmol/mol) & NGSP (%) units.

**LFT****Liver Function Test (LFT)**

Investigation	Observed Value	Biological Reference Interval	Unit
<b>BILLIRUBIN</b>			
Total Bilirubin	0.80	0 - 1.2	mg/dL
Direct Bilirubin	<b>0.46</b>	0.0 - 0.25	mg/dL
Indirect Bilirubin	0.34	0.2 - 1	mg/dL
<b>LIVER ENZYMES</b>			
SGPT (ALT)	12	0 - 40	IU/L
SGOT (AST)	17	0 - 31	U/L
Alkaline Phosphatase	71	60 - 320	U/L
<b>SERUM PROTEINS</b>			
Total Serum Protein	7.0	6.3 - 7.9	g/dL
Serum Albumin	3.96	3.5 - 5.5	g/dL
Serum Globulin	3.04	2.5 - 3.5	g/dL
A/G Ratio	1.30	1.1 - 2.1	

**Clinical Information:**

Liver function tests, also known as liver chemistries, help determine the health of your liver by measuring the levels of proteins, liver enzymes, and bilirubin in your blood. Having abnormal results on any of these liver tests typically requires follow up to determine the cause of the abnormalities. Even mildly elevated results can be associated with liver disease. However, these enzymes can also be found in other places besides the liver.

Talk to your doctor about the results of your liver function test and what they may mean for you.

<b>(GGT)</b>			
Gamma Glutamyl Transferase (GGT)	26.18	5 - 36	U/L
<b>SERUM CREATININE</b>			
Serum Creatinine	0.75	0.5 - 0.9	mg/dL

Note: 1) Diagnosing and monitoring treatment of acute and chronic renal disease.

2) adjusting dosage of renally excreted medications

3) Monitoring renal transplant recipients.

**URIC ACID**

Serum Uric Acid 3.47 2.6 - 6.0 mg/dL

Most uric acid is synthesized in the liver and mainly excreted by kidney. It is an end product of purine catabolism. Levels are labile and show day to day and seasonal variation in same person. Levels are also increased by emotional stress, total fasting and increased body weight. Mainly used for monitoring treatment of gout and chemotherapeutic treatment of neoplasm. Levels are increased in renal failure, gout, certain neoplastic condition (Increased cell turn over), Hemolytic anemia, toxemia of pregnancy.

**UREA**

Serum Urea 29.90 13 - 40 mg/dL

**BUN**

BUN 13.95 7.0 - 20.0 mg/dL
