CLINICAL-BIOCHEMISTRY

<u>Test Name</u>	<u>Observation Unit</u>	<u>Biological Ref.</u>
PSA Prostate Specific Antigen, Serum by CMA	2.20 ng/ml	0.0-4.0

Remarks:-

Measurement of serum PSA levels is not recommended as a screening procedure for the diagnosis of cancer because elevated PSA levels are also observed in patients with benign prostatic hypertrophy. PSA levels increase in men with cancer of the prostate and after radical prostatectomy PSA levels routinely fall to the undetectable range.

If prostatic tissue remains after surgery or metastasis has occurred, PSA appears to be useful in detecting residual and early recurrence of tumor.

Serial PSA levels can help determine the success of prostatectomy and the need for further treatment, such as radiation, endocrine or chemotherapy and in the monitoring of the effectiveness of therapy.

BOB HEALTH CHECK UP

U.S.G. OF ABDOMEN & PELVIS

LIVER

Liver is **13.5 CM with mild increase echogenicity**. Intra hepatic biliary radicals are not dilated.
No evidence of focal or diffuse lesion.

GALL BLADDER

Gall bladder is normal dilated. Lumen clear. Wall thickness normal. CBD normal

PANCREAS

Pancreas is normal in size, shape & echo-texture.

SPLEEN

8.5 cm in size with normal shape & echo- texture.

BOTH KIDNEY

Both kidney normal shape, size & echo texture. CMD maintained

PROSTATE is normal shape, size & echo texture..

URINARY BLADDER is normal shape, size & echo texture..

Impression:- Grade I fatty liver

Please correlate clinically. USG accuracy is 95 % due to technical limitations as well as inaccuracies inherent in the laboratory and statistical analysis biological process.

This report is not valid for medico-legal cases.
