DEPARTMENT OF RADIOLOGY

Patient Name	Mr SUDERSHAN KUMAR	Billed Date	: 07/02/2022	10.28 AM
Reg No	10304	Reported Date	: 07/02/2022	
Age/Sex	28 Years 5 Months 15Days / Male	Req. No.	: 22079971	
Ref. Doctor	Self	Consultant Doctor	: Dr. Pramod Kumar srivastava	
Type	OPD			

USG WHOLE ABDOMEN

FINDINGS:

LIVER is normal in size (134 mm) and **shows grade I fatty infiltration**. No evidence of any focal lesion or IHBR dilation is present. Portal and hepatic veins are normal in caliber at porta.

GALL BLADDER is well distended and lumen is echofree. Wall thickness is normal. No pericholecystic fluid is seen.

CBD is normal in course and caliber. No evidence of intraluminal calculus seen in visualized segments.

SPLEEN is normal in size (114 mm) and echotexture. No focal lesion is seen.

PANCREAS is obscured by bowel gas.

RIGHT KIDNEY: is normal in size (99x43 mm) and position and outline. Corticomedullary differentiation is maintained. There is no evidence of any focal lesion / calculus / backpressure changes.

LEFT KIDNEY: is normal in size (106x50 mm) and position and outline. Corticomedullary differentiation is maintained. There is no evidence of any focal lesion / calculus / backpressure changes.

URINARY BLADDER is partially distended and grossly appear normal.

PROSTATE is grossly appears normal.

No free fluid is seen in the abdomen.

IMPRESSION: Grade I fatty liver.

To be correlate clinically

Dr. Rishi Raj Singh
MBBS, DNB, CFR
Consultant Radiologist

IMMUNOLOGY

Test Name With Methodology	Value	Unit	Bio Ref.Interval
----------------------------	-------	------	------------------

Thyroid Profile-I (T3, T4, TSH)

T3 ,Serum Method:CLIA	128.00	ng/dL	60-181
T4 ,Serum Method:CLIA	10.30	ug/dL	4.5-12.6
TSH, Serum Method:CLIA	15.10	uIU/mL	0.13-6.33

Comments:

The usual blood test done for thyroid function are TSH, T4 and rarely T3. A blood sample is taken from vein. Usually the free or active portion of T3 and T4 is measured. In pregnancy the serum TSH reference range is different from the general population and should ideally be based on reference ranges derived from healthy pregnant women in the same population.

Reference Range

Age	Total T3 (ng/dl)	Total T4 (µg/dl)	TSH (µIU/ml)
1 - 6 days	73 - 288	5.04 - 18.5	0.7 - 15.0
6 days -3 months	80 - 275	5.41 - 17.0	0.72 - 11.0
4 - 12 months	86 - 265	5.67 - 16.0	0.73 - 8.35
1 - 6 years	92 - 248	5.95 - 14.7	0.70 - 5.97
7 - 11 years	93 - 231	5.99 - 13.8	0.60 - 5.84
12 - 20 years	91 - 218	5.91 - 13.2	0.51 - 6.50
>20 years	60 - 181	4.50 - 12.6	0.13 - 6.33

NOTE :

TSH levels are subject to circadian variation, reaching peak levels between 2-4 AM and min between 6-10 PM. The variation is the order of 50% hence time of the day has influence on the measures serum TSH concentration. Dose and time of drug intake also influence the test results.

INTERPRETATIONS :

- 1.If the TSH level is high and the T4 result is low this suggests an underactive thyroid (hypothyroidism) that requires treatment.
- 2.If the TSH level is low and the T4 result is high this suggests an overactive thyroid (hyperthyroidism) that requires treatment.
- 3.If the TSH level is slightly raised but the T4 level is still within the normal reference range this is called subclinical hypothyroidism or mild thyroid failure.
- 4.A low TSH with a low T4 may be a result of a failure of the pituitary gland (secondary hypothyroidism caused by hypopituitarism) or a response to a significant non-thyroid illness.
