Test Name	Results	Units	Bio. Ref. Interval
<u>VITAMIN B12</u>			
VITAMIN B12	591	pg/mL	211 - 911

Method CLIA

Sample Type: Serum

Note:

Dietary sources of Vitamin B12 are meat, eggs, milk and milk products. Vitamin B12 requires intrinsic factor for absorption from intestine.
 B12 deficiency causes hematological and neurological abnormalities. Decreased serum B12 levels causes increased excretion of methylmalonic acid. The impaired DNA synthesis associated with Vitamin B12 deficiency causes macrocytic anemias. In sever is characterized by abnormal maturation of erythrocyte, myeloid precursors and megakaryocytes in the bone marrow, which results in the pancytopenia.
 Withhold Vitamin B12 injection before the blood is drawn. Blood collected after Vitamin B12 Injection interfere with result. Preservatives such as fluorides & ascorbic acid interfere with this assay. Excessive exposure of the specimen to light may alter Vitamin B12 result.
 To differentiate vitamin B12 & folate deficiency, measurement of Methyl malonic acid in urine & serum Homocysteine level is suggested.

T4 (Thyroxine) <i>Method: CLIA</i>	7.6	µg/dL	4.5 - 12.6
TSH (ultra sensitive) <i>Method: CLIA</i>	1.843	µIU/mL	0.55 - 4.78

Comments:

Thyroid stimulating hormone (TSH) is synthesized and secreted by the anterior pituitary in response to a negative feedback mechanism involving concentrations of FT3 (free T3) and FT4 (free T4). Additionally, the hypothalamic tripeptide, thyrotropin-releasing hormone (TRH), directly stimulates TSH production. TSH stimulates thyroid cell production and hypertrophy, also stimulate the thyroid gland to synthesize and secrete T3 and T4. Quantification of TSH is significant to differentiate primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

TSH levels During Pregnancy :

- First Trimester : 0.1 to 2.5 µIU/mL
- Second Trimester : 0.2 to 3.0 µIU/mL
- Third trimester : 0.3 to 3.0 µIU/mL
