## **2D-ECHOCARDIOGRAPHY AND COLOR DOPPLER REPORT**

**NAME: NAYNABEN VASAVA**

**AGE/SEX: 49 YRS/FEMALE**

**DATE: 09/03/2024**

**REF BY: DIRECT**

### **OBSERVATION: TACHYCARDIA NOTED DURING STUDY**

- NORMAL LV SIZE AND NORMAL LV SYSTOLIC FUNCTION. LVEF = 60% (VISUAL).
- NO RWMA AT REST.
- CONCENTRIC LEFT VENTRICULAR HYPERTROPHY.
- GRADE I LV DIASTOLIC DYSFUNCTION.
- TRIVIAL MR. NO MS.
- NO AR. NO AS.
- TRIVIAL TR. NO PAH.
- NORMAL SIZED LA, RA & RV WITH NORMAL RV SYSTOLIC FUNCTION.
- NORMAL SIZED MPA, RPA & LPA.
- IAS & IVS : INTACT.
- NO E/O INTRACARDIAC CLOT/VEGETATION/PE.
- NORMAL IVC.
- NORMAL PERICARDIUM.

**LA: 31MM**

**AO: 30MM**

**IVS: 09/13MM**

**LVPW: 09/13MM**

**LVID: 42/24MM**

### **CONCLUSION:**

- **CONCENTRIC LEFT VENTRICULAR HYPERTROPHY**
- **NORMAL LV/RV SIZE AND SYSTOLIC FUNCTION.**
- **NO RWMA AT REST.**
- **LVEF = 60% (VISUAL).**

**DR.NIRAV BHALANI**  
[CARDIOLOGIST]

**DR.ARVIND SHARMA**  
[CARDIOLOGIST]

PATIENT NAME: NAYNABEN B. VASAVA	
AGE/SEX: 49 YRS/F	DATE: Saturday, 09 March 2024

**ULTRASOUND OF ABDOMEN & PELVIS**

**LIVER** appears normal in size and shows normal parenchymal echogenicity. No evidence of focal lesion. No evidence of dilated IHBR or portal vein. CBD appears normal.

**GALL BLADDER** is distended. No evidence of abnormal wall thickening or any significant calculus within.

**PANCREAS** appears normal. MPD is WNL.

**SPLEEN** appears normal in size and shows normal parenchymal echogenicity. No evidence of focal lesion.

**BOTH KIDNEYS** appear normal in size, shape and position.  
Show normal cortical echogenicity. Corticomedullary differentiation is maintained.  
No evidence of calculus or hydronephrosis on either side.

**URINARY BLADDER** is partially full. No evidence of abnormal wall thickening or any significant calculus within.

**UTERUS** appears normal in size and position. CET is 9.7 mm WNL. No evidence of focal lesion noted. Bilateral ovaries appear normal in size. No evidence of focal or obvious mass lesion noted.

**BOWEL LOOPS** appear normal and show normal peristalsis.  
No evidence of LYMPHADENOPATHY noted,  
No evidence of ASCITES noted.

**IMPRESSION:**

- NO SIGNIFICANT ABNORMALITY AT PRESENT SCAN.

  
**DR SHARAD RUNGTA (MD & DNB)**  
**COUNSULTANT RADIOLOGIST**

*Not all pathologies can be detected on ultrasound in each scan. Further radiographic evaluation is suggested if required.*

PATIENT NAME: NAYNABEN B. VASAVA

AGE/SEX: 49 YRS/F

DATE: Saturday, 09 March 2024

**CHEST X-RAY (PA)**

Both lung fields appear normal.

Both hila appear normal

Bilateral costo-phrenic angles appear grossly clear

Mediastinum and cardiac shadow appear normal

Bony thorax appears unremarkable

No evidence of free gas under domes of diaphragm

**IMPRESSION:**

- NO SIGNIFICANT ABNORMALITY NOTED IN LUNG FIELDS
- NORMAL CARDIAC SHADOW

  
DR SHARAD RUNGTA (MD & DNB)  
CONSULTANT RADIOLOGIST

*Not all pathologies can be detected on ultrasound in each scan. Further radiographic evaluation is suggested if required.*

## CONDITIONS OF REPORTING

1. The reported results are for the referring doctor's information only. Isolated results may not confirm the final diagnosis of a disease and should be interpreted with patient's clinical history, keeping in mind the limitations of methodology and technology. Partial reproduction of these reports are illegal.
2. Neither Unipath Specialty Laboratory (Baroda) LLP, nor its partners, officer, employee / representatives and affiliate assume liability, responsibility for any loss or damage of any nature whatsoever that may be incurred or suffered by any person as a result of use of the report.
3. In case of collected specimens, which are referred to USL(B). LLP, from a referral centre, it is presumed that patient's demographics are verified and confirmed at the point of generation of the said specimens and the result(s) relate only to the samples(s) receive.
4. USL(B).LLP does not verify client/patients' identity at the time of sample collection. It is presumed that whatever information given by them is true which is reflected in reports.
5. Laboratory results are subject to pre-analytical, analytical, post-analytical variable and technical limitations including human errors. USL(B).LLP kindly requests to correlate the reported results clinically. USL(B).LLP strongly recommends reconfirmation of high abnormal/unusual results with repeat fresh sample before taking any medical decision.
6. Results relate only to the sample tested. Result of laboratory tests may vary from laboratory to laboratory and also in some parameters from time to time for the same patient; may be due to physiological variations, different methodology, technology & its limitations etc.
7. A requested test might not be performed in case of following reasons: a) Insufficient quantity of specimen (inadequate collection/spillage in transit) b) Specimen quality unacceptable (hemolysed/clotted/lipemic etc) c) Incorrect specimen type d) Incorrect identity of specimen. In above mentioned circumstances it is expected that a fresh specimen will be sent for the purpose of the reporting on the same parameter.
8. In unanticipated circumstances (non-availability of kits, instrument breakdown & natural calamities) tests may not be reported as per schedule. However USL(B). LLP. will ensure that the delay is minimized.
9. The sex of the fetus will not be revealed as per the Prenatal Diagnostic Technique (Regulation and Prevention of Misuse Act, 1994)
10. Tests parameters marked by asterisks (\*) are excluded from the "scope" of NABL accredited tests.
11. It is mandatory to send Biopsy/Histopathology specimen in 10% formalin.
12. Partial reproduction of these reports are illegal & not permitted.
13. These reports are not valid for medico-legal purposes.
14. Any queries regarding possible interpretation / clinical - pathological correlation from referring doctor/patient should be directed to the pathologists.
15. Subject to Baroda Jurisdiction only.

## GENERAL PRINCIPLES OF LABORATORY TESTING & LABORATORY REFERENCE RANGES

1. Under the best of circumstances, no test is having 100% sensitivity & 100% specificity. In the majority of laboratory parameters, the combination of short-term physiologic variation & analytical error/technological limitations are sufficient to render the interpretation of single determinations difficult especially when the concentrations are in borderline range. Any particular laboratory test result may be misleading (not correlating with clinical findings) for large varieties of reasons, regardless of high quality of laboratory, such results should be rechecked. If indicated new specimen should be submitted.
2. Reference ranges (biological reference interval) vary from one laboratory to another and with age, sex, race, size, physiologic status (e.g. pregnancy & lactation) that apply to the particular patient. Reference values represent the statistical data for 95% of the population; values outside these ranges do not necessarily represent disease. Result may still be within the reference range but be elevated above the patient's baseline, which is why serial testing is important in a number of conditions.
3. The effects of drugs on laboratory test values must never be overlooked. Laboratory values in elderly must be interpreted in light of many factors that affects "normal" values in this group.
4. Negative laboratory test results do not necessary rule out a clinical diagnosis.

TEST REPORT

Reg. No. : 40301005151      Reg. Date : 09-Mar-2024 15:53      Collected On : 09-Mar-2024 15:53  
 Name : Ms. NAYNA VASAVA      Approved On : 09-Mar-2024 17:23  
 Age : 49 Years      Gender : Female      Ref. No. :      Dispatch At :  
 Ref. By :      Tele No. :  
 Location : SAVITA SUPERSPECIALTY HOSPITAL @ WAGHODIYA ROAD

Test Name	Results	Units	Bio. Ref. Interval
<b>THYROID FUNCTION TEST</b>			
T3 (triiodothyronine) <i>Method CLIA</i>	1.18	ng/mL	0.6 - 1.81
T4 (Thyroxine) <i>Method CLIA</i>	6.90	µg/dL	4.5 - 12.6
TSH ( ultra sensitive) <i>Method CLIA</i>	<u>H 6.557</u>	µIU/mL	0.55 - 4.78
Sample Type: Serum			

**Comments:**  
 Thyroid stimulating hormone (TSH) is synthesized and secreted by the anterior pituitary in response to a negative feedback mechanism involving concentrations of FT3 (free T3) and FT4 (free T4). Additionally, the hypothalamic tripeptide, thyrotropin-releasing hormone (TRH), directly stimulates TSH production. TSH stimulates thyroid cell production and hypertrophy, also stimulate the thyroid gland to synthesize and secrete T3 and T4. Quantification of TSH is significant to differentiate primary (thyroid) from secondary (pituitary) and tertiary (hypothalamic) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

**TSH levels During Pregnancy :**

- First Trimester : 0.1 to 2.5 µIU/mL
- Second Trimester : 0.2 to 3.0 µIU/mL
- Third trimester : 0.3 to 3.0 µIU/mL
