Greetings from Apollo!!

Respected Sir/Madam,

Please find corporate HC appointment details scheduled for **08-08-2023** at your **SAIMAN HEALTHCARE PVT LTD - DELHI City Center.**

Points to note:-

- Collect photocopy of employee ID proof if health check is through an employer.
- Collect photocopy of personal ID proof if health check is for insurance.
- Collect MER as per package details & that company's format (already shared).
- By 12 noon of appointment date, share Work order number & visit status (Show/No show).
- Upload reports in Adbthum portal as per specifications given earlier.

-----------	-------	------	-------------------------

HAEMATOLOGY

Glycosylated Hemoglobin (HbA1C)

HbA1C	5.1	%
Estimated average plasma Glucose	100	%

Interpretation:

As per American Diabetes Association (ADA)

Reference Group	HbA1c in %
Non diabetic adults >=18 years	<5.7
At risk (Prediabetes)	5.7-6.4
Diagnosing Diabetes	>= 6.5
Therapeutic goals for glycemic control	Age >19 years: Goal of therapy: <7.0 Age <19 years: Goal of therapy: <7.5

Note:

1. Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient who is recently under good control may still have a high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.
2. Target goals of <7.0% may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targeting a goal of <7.0% may not be appropriate.

Comments:

HbA1c provides an index of average blood glucose levels over the past 8 - 12 weeks and is a much better indicator of long-term glycemic control as compared to blood and urinary glucose determinations.

ADA criteria for correlation between HbA1c & Mean plasma glucose levels.

HbA1c (%)	Mean Plasma Glucose (mg/dL)
6	126
7	154
8	183
9	212
10	240
11	269
12	298

Test Name	Value	Unit	Biological Ref Interval
Lipid Profile			
Cholesterol - Total <small>Spectro-photometry</small>	155.0	mg/dl	Desirable = < 200 Borderline = 200-239 High Cholesterol = = 240 Child Desirable = < 170 Borderline = 170-199 High Cholesterol = >199
Triglycerides (TG) <small>Glycerol Peroxidase</small>	78.6	mg/dl	0.0 - 161.0 High : 161-199 Hypertriglyceridemic : 200-499 Very High : > 499
Cholesterol - HDL <small>Spectro-photometry</small>	45.5	mg/dl	42.0 - 88.0
Cholesterol - LDL <small>Spectro-photometry</small>	93.8	mg/dl	0.0 - 130.0 Borderline High : 130 - 159 High : > 160
VLDL Cholesterol <small>Calculated</small>	15.7	mg/dl	4.7 - 22.1
Serum Total / HDL Cholesterol Ratio <small>Calculated</small>	3.41		4.50 - 6.00
Serum LDL / HDL Cholesterol Ratio <small>Calculated</small>	2.06		0.00 - 3.50

CHOLESTEROL, its fractions and triglycerides are the important plasma lipids in defining cardiovascular risk factors and in the management of cardiovascular disease. Highest acceptable and optimum values of cholesterol vary with age. Values above 220 mg/dl are associated with increased risk of CHD regardless of HDL & LDL values.

TRIGLYCERIDE level >250 mg/dL is associated with an approximately 2-fold greater risk of coronary vascular disease. Elevation of TRIGLYCERIDE can be seen in obesity, medication, fast less than 12 hrs., alcohol intake, diabetes mellitus, and pancreatitis.

HDL-CHOLESTEROL level <35 mg/dL is associated with an increased risk of coronary vascular disease even in the face of desirable levels

Test Name	Value	Unit	Biological Ref Interval
-----------	-------	------	-------------------------

of cholesterol and LDL-cholesterol.

LDL-CHOLESTEROL & TOTAL CHOLESTEROL levels can be strikingly altered by thyroid, renal and liver disease as well as hereditary factors. Based on total cholesterol, LDL- cholesterol, and total cholesterol/HDL- cholesterol ratio, patients may be divided into three risk categories:

	<u>CHOLESTEROL</u>	<u>LDL-CHOLESTEROL</u>	<u>CHO/HDL RATIO</u>
Acceptable/Low Risk	<200 mg/dL	<130 mg/dL	< 4.5
Borderline High Risk	200-239 mg/dL	130-159 mg/dl	4.5-6.0
High Risk	> 240 mg /dL	>160 mg/dL	>6.0

APO A1 & APO B: Recent studies have shown that Apolipoproteins A1 & B might be the best indicators of coronary artery disease risk in an individual. Patients who have normal lipid profile may have abnormal Apo A1 & Apo B values. Ratio of Apo B:Apo A1 is >1 in cases of increased CHD risk.

Test Name	Value	Unit	Biological Ref Interval
-----------	-------	------	-------------------------

IMMUNOASSAY**Thyroid Profile Total**

Triiodothyronine Total (TT3) CLIA	0.72	ng/dL	0.69 - 2.15
Thyroxine - Total (TT4) CLIA	112.30	ug/dl	52.00 - 127.00
Thyroid Stimulating Hormone (TSH) Method:- CLIA	2.62	uIU/ml	0.35 - 5.50

COMMENTS:

Assay results should be interpreted in context to the clinical condition and associated results of other investigations. Previous treatment with corticosteroid therapy may result in lower TSH levels while thyroid hormone levels are normal. Results are invalidated if the client has undergone a radionuclide scan within 7-14 days before the test. Abnormal thyroid test findings often found in critically ill clients should be repeated after the critical nature of condition is resolved. The production, circulation, and disintegration of thyroid hormones are altered throughout the stages of pregnancy.

PREGNANCY	REFERENCE RANGE for TSH IN uIU / ml (As per American Thyroid Association)
1 st Trimester	0.10-2.50 uIU /mL
2 nd Trimester	0.20-3.00 uIU /mL
3 rd Trimester	0.30-3.00 uIU /ml

TSH IS DONE BY ULTRASENSITIVE 4TH GENERATION CHEMIFLEX ASSAY

INTERPRETATIONS:

1. Primary hyperthyroidism is accompanied by elevated serum T3 & T4 values along with depressed TSH level.
2. Primary hypothyroidism is accompanied by depressed serum T3 and T4 values & elevated serum TSH levels.
3. Normal T4 levels accompanied by high T3 levels and low TSH are seen in patients with T3 thyrotoxicosis.
4. Normal or low T3 & high T4 levels indicate T4 thyrotoxicosis (problems in conversion of T4 to T3).
5. Normal T3 & T4 along with low TSH indicate mild / subclinical HYPERTHYROIDISM.
6. Normal T3 & low T4 along with high TSH is seen in HYPOTHYROIDISM.
7. Normal T3 & T4 levels with high TSH indicate Mild / Subclinical HYPOTHYROIDISM.
8. Slightly elevated T3 levels may be found in pregnancy and in estrogen therapy while depressed levels may be encountered in severe illness, malnutrition, renal failure and during therapy with drug like propranolol.
9. Although elevated TSH levels are nearly always indicative of primary hypothyroidism. Rarely they can result from TSH secreting pituitary tumours (secondary hyperthyroidism).

Papanicolaou (PAP) Cytology

In Accordance with Bethesda 2001

Specimen Sample Type: Body Fluids	PAP Smear (02 unstained slides)
Adequacy Sample Type: Body Fluids	Satisfactory for evaluation.
Microscopic Evaluation: Type: Body Fluids	Endocervical / transformation zone component seen.

Impression: Negative for intraepithelial lesion or malignancy

USG Whole Abdomen

Liver is normal in size & **echogenic in echotexture s/o fatty liver grade II**. No focal SOL noted. Vascular channels are clear. No evidence of I.H.B.R. dilatation seen.

Gall Bladder is well distended and reveals normal walls. No evidence of calculus or mass lesion is noted. CBD & PV are normal.

Spleen is normal in size, shape and echotexture. No focal SOL noted.

Pancreas is normal in size, shape & echotexture. No focal SOL noted.

Both Kidneys are normal in size, shape, position, outline & echogenicity. CMD is well preserved. No evidence of calculus/mass lesion or hydronephrosis seen.

Urinary Bladder is well distended with normal wall thickness. Lumen is clear. No calculi / mass lesion noted. No diverticulum noted.

Uterus is normal in size, anteverted. No focal lesion is noted. Endometrial thickness is normal.

Both ovaries are normal in size and echogenecity. No adnexal mass is seen.

No free fluid seen in the peritoneal cavity.

Bowel loops are grossly normal.

IMPRESSION: GRADE II FATTY LIVER
