| Test Name   | Value |    | Unit      | Biological Reference<br>Interval |
|---|-------|----|-----------|----------------------------------|
| HbA1c (Glycosylated haemoglobin), EDTA whole blood                          | 5.1   |    | %         | < 5.7                            |
| Method : HPLC  Estimated average plasma Glucose  Method : Calculated        | 99.67 |    | mg/dL     | 65 - 136                         |
| The test is approved by NGSP for patient sample testing.<br>Interpretation: |       |    |           |                                  |
| Metabolically normal patients   |       | %  | < 5.7     |                                  |
| Pre-diabetic  |       | 96 | 5.7 - 6.4 |                                  |

Diabetic Glycosylated hemoglobin or HbA1C is a reliable indicator of mean plasma glucose levels for a period of 8-12 weeks preceeding the date on which the test is performed and is a more reliable indicator of overall blood sugar control in known diabetic patients than blood sugar levels. A value of less than 5.7 % is usually seen in metabolically normal patients, however diabetics with very good control can also yield similar values. The HbA1c test, thus can not be used to differentiate between diabetic patients with very good control over the plasma glucose levels from metabolically normal, non-diabetic subjects as both groups may reveal very similar values in the assay.

This test was performed at Prognosis Laboratories, 515-516, Sector-19, Dwarka, Behind Gupta Properties

TSH (Thyroid Stimulating Hormone), serum

1.40

uIU/ml

0.27 - 4.2

Interpretation:

1. Primary hyperthyroidism is accompanied by elevated serum FT3 and FT4 values alongwith depressed TSH levels.

2. Primary hypothyroidism is accompanied by depressed serum FT3 and FT4 values and elevated serum TSH levels.

3. High FT3 levels accompanied by normal FT4 levels and depressed TSH levels may be seen in T3 toxicosis.

4. Central hypothyroidsm occurs due to pitutary or thalamic malfunction (secondary and tertiary hypothyroidism respectively). This relatively rare but important condition is indicated by presence of low serum FT3 and FT4 levels, in conjunction with TSH levels that are paradoxically either low/normal or are not elevated to levels that are expected.

The following ranges are recommended for pregnant females:

|                  | uIU/ml | 0.1 - 2.5 |
|------------------|--------|-----------|
| First trimester  | uIU/ml | 0.2 - 3.0 |
| Second trimester | 7,000  | 0.3 - 3.0 |
| Third trimester  | uIU/ml | 0.3 - 3.0 |

: 13-Jan-2024 Reporting DATE Sex: Female : 34 YRS Age/Sex

IPD NO : OPD OPD/IPD

#### ULTRASOUND

Liver is normal in size and shows normal echo pattern. There is no focal hepatic lesion present. CBD is normal in course & calibre & measures 3 mm at porta hepatis. There is no calculus defined in the CBD. Intra hepatic biliary radicals are normal.

Gallbladder is normal in distension & contains no calculi,

: 13-Jan-2024

Pancreas is normal in size & echopattern.

Spleen is normal in size & echopattern.

Both kidneys are normal in shape size contour & echo pattern. There is no hydronephrosis defined on either side. Both ureters are obscured by bowel gas.

Bladder is normal in distension & contains no calculi. No mass is defined in bladder.

There is no free fluid present in abdomen.

Impression: No significant abnormality
