*Result relates only to the sample as received. Kindly correlate with clinical conditions.

NOTE:

1. Decreased T3 (normal T4 & TSH) have minimal clinical significance and are not recommended for diagnosis of hypothyroidism
2. Total T3 may be decreased by < 25% in healthy older individuals.
3. Total T3 & T4 values may also be altered under other conditions like pregnancy, drugs (androgens,estrogens, O C phenytoin) nephrosis etc. In such cases free T3 and Free T4 are preferred tests.
4. Clinically correlate the result or repeat the tests with fresh sample if TSH values are between 5 - 15 mIU/L as physiological factors may give falsely high TSH.
