

To.
Medibuddy

Subject: Submission of stool sample.

Sir,
I am uncomfortable to submit the
stool sample here. don't want to undergo
the stool test at Simira Diagnostics
New panel.

Regards.

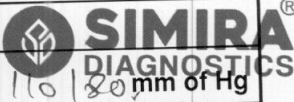

Akshay Bhutankar
Bank of Baroda.
EC No - 172366

X-RAY CHEST- PA VIEW

Both lung fields are clear.

Both costophrenic angles appear clear.

Cardiothoracic ratio is within normal limits.

Both domes of diaphragm appear normal.

Bony thoracic cage & soft tissues appear normal.

Impression: No significant abnormality.

Please correlate the findings with clinical examination, history & blood investigations.

Dr. Vivek Singh
MBBS MD RADIOLOGIST

ULTRASOUND ABDOMEN AND PELVIS

LIVER:

The liver is normal in size (14.4cm), shape and smooth margins. **It shows bright parenchymal echo pattern.** The intra hepatic biliary and portal radical appear normal. No evidence of any intra hepatic cystic or solid lesion seen. The main portal vein and CBD appears normal to the extent visualized.

GALL BLADDER:

The gall bladder is physiologically distended and appears normal. No evidence of gall stones or mass lesions seen.

PANCREAS:

The pancreas head and partial body is visualized and appears normal. No evidence of solid or cystic mass lesion. Rest of the pancreas is obscured due to bowel gas shadows.

KIDNEYS:

Both the kidneys are normal in size, shape and echotexture.

No evidence of any calculus, hydronephrosis or mass lesion seen.

Right Kidney: 10.2 x 4.6cm.

Left Kidney: 10.2 x 5.1cm.

SPLEEN:

The spleen is normal in size (9.6cm) and echotexture. No evidence of focal lesion is noted.

There is no evidence of any lymphadenopathy or ascites.

URINARY BLADDER:

The urinary bladder is minimally distended and reveals no intraluminal abnormality.

PROSTATE:

The prostate is normal in size and volume is 17cc.

IMPRESSION:

- **Grade II fatty liver.**

Suggestion: Clinicopathological correlation.

Note: Investigations have their limitations. Solitary radiological investigations never confirm the final diagnosis. They only help in diagnosing the disease in correlation to clinical symptoms and other related tests. USG is known to have inter-observer variations. Further / Follow-up imaging may be needed in some case for confirmation of findings. Patient has been explained in detail about the USG findings including its limitations and need for further imaging if clinically indicated. Please interpret accordingly. All the possible precaution has been taken under covid-19 pandemic.

Age : Male / 35 Years	Pass. No. :	Received On : 27-Jul-2024 16:24
Ref. By : Dr. MEDIWHEEL		Reported On : 27-Jul-2024 19:48
Location :		

Test Name	Results	Units	Bio. Ref. Interval
ESR	H 20	mm/hr	0 - 9

Method: Modified Westergren

Sample Type: EDTA Whole Blood

Interpretation:

An erythrocyte sedimentation rate test, also called an ESR or sed rate test, measures the speed at which red blood cells settle to the bottom of an upright glass test tube. This measurement is important because when abnormal proteins are present in the blood, typically due to inflammation or infection, they cause red blood cells to clump together and sink more quickly, which results in a high ESR value. The ESR is useful in detecting inflammation in the body that may be caused by infection, some cancers, and certain autoimmune diseases such as juvenile idiopathic arthritis, lupus, and Kawasaki disease. The ESR alone can't be used to diagnose any one specific disease, however.

BLOODGROUP & RH

Specimen: EDTA and Serum; Method: Gel card system

Blood Group "ABO" <i>Agglutination</i>	"O"
Blood Group "Rh" <i>Agglutination</i>	Positive

Sample Type: EDTA Whole Blood

Interpretation:

1. This report only confirms the Cell grouping of the patient; serum grouping is not performed at our laboratory
2. This report is valid only for the sample received
3. After incubation at 37 degree C for the purpose of confirmation
4. This test does not rule out the possibility of the presence of rare blood group types, ambiguous results such as different blood group typing at different laboratories with different antisera and such cases require further testing at a specialized laboratory.
5. It is advisable to perform serum (reverse) grouping in the cases of negative blood groups.
6. Kindly consult the laboratory personnel for further workup in cases of Rh(D) NEGATIVE Blood groups
7. This blood group report has not been intended for blood transfusion blood group should have been rechecked.

This is an electronically authenticated report. "Please verify the authenticity of this report by scanning the QR code to ensure data integrity."
