Lab No.	012404120152	Age/Gender	34 YRS/MALE	Coll. On	12/Apr/2024 09:15AM
Name	Mr. ANSHUL SAXENA	BarcodeNo	01120152	Reg. On	12/Apr/2024
Ref. Dr.				Approved On	12/Apr/2024 10:28AM
Rpt. Centre	Self,undefined			Printed On	12/Apr/2024 03:02PM

Test Name	Value	Unit	Biological Reference Interval
-----------	-------	------	-------------------------------

HbA1c (Glycosylated haemoglobin), EDTA whole blood <i>Method : HPLC</i>	5.80	%	< 5.7
Estimated average plasma Glucose <i>Method : Calculated</i>	119.76	mg/dL	65 - 136

The test is approved by NGSP for patient sample testing.

Interpretation:

Metabolically normal patients	%	< 5.7
Pre-diabetic	%	5.7 - 6.4
Diabetic	%	> 6.4

Glycosylated hemoglobin or HbA1C is a reliable indicator of mean plasma glucose levels for a period of 8-12 weeks preceding the date on which the test is performed and is a more reliable indicator of overall blood sugar control in known diabetic patients than blood sugar levels. A value of less than 5.7 % is usually seen in metabolically normal patients, however diabetics with very good control can also yield similar values. The HbA1c test, thus can not be used to differentiate between diabetic patients with very good control over the plasma glucose levels from metabolically normal, non-diabetic subjects as both groups may reveal very similar values in the assay.

Rpt. Centre	Self,undefined			Printed On	12/Apr/2024 03:02PM

Test Name	Value	Unit	Biological Reference Interval
-----------	-------	------	-------------------------------

TSH (Thyroid Stimulating Hormone), serum **4.66** uIU/ml 0.27 - 4.2
 Method : ECLIA

Interpretation:

1. Primary hyperthyroidism is accompanied by elevated serum FT3 and FT4 values alongwith depressed TSH levels.
2. Primary hypothyroidism is accompanied by depressed serum FT3 and FT4 values and elevated serum TSH levels.
3. High FT3 levels accompanied by normal FT4 levels and depressed TSH levels may be seen in T3 toxicosis.
4. Central hypothyroidism occurs due to pituitary or thalamic malfunction (secondary and tertiary hypothyroidism respectively). This relatively rare but important condition is indicated by presence of low serum FT3 and FT4 levels, in conjunction with TSH levels that are paradoxically either low/normal or are not elevated to levels that are expected.

The following ranges are recommended for pregnant females:

First trimester	uIU/ml	0.1 - 2.5
Second trimester	uIU/ml	0.2 - 3.0
Third trimester	uIU/ml	0.3 - 3.0

*Disclaimer: This is an electronically validated report. If any discrepancy is found, it should be confirmed by the user.

ULTRASOUND

Liver is normal in size & echo pattern. There is no focal hepatic lesion present. CBD is normal in course & calibre & measures 3 mm at porta hepatis. There is no calculus defined in the CBD. Intra hepatic biliary radicals are normal. Gallbladder is normal in distension & contains no calculi.

Pancreas is normal in size contour & echo pattern The pancreatic duct is not dilated. Pancreatic contour is regular & peri pancreatic planes are maintained.

Spleen is normal in size & echo pattern.

Both kidneys are normal in shape size contour & echo pattern. There is no hydronephrosis defined on either side. Both ureters are obscured by bowel gas.

Bladder is normal in distension & contains no calculi. There is no mass defined in the bladder.

There is no free fluid present in the abdomen.
