Basophils	00	%	0-1

Note :
Tests done on Automated Six Part Cell Counter. (WBC, RBC, Platelet count by impedance method, colorimetric method for Hemoglobin, WBC differential by flow cytometry using laser technology other parameters are calculated). All Abnormal Haemograms are reviewed confirmed microscopically.

ESR :- Erythrocyte Sedimentation Rate *BL

Erythrocyte Sedimentation Rate <small>Method : Westergren</small>	12	mm/1 hr	03 - 15
--	----	---------	---------

Blood Grouping RH Typing *BL

Blood Grouping	"A"
Rh (D) Typing	Positive
Methodology	

This is done by forward grouping by Slide Agglutination method.

Interpretation

Newborn baby does not produce ABO antibodies until 3 to 6 months of age. So the blood group of the Newborn baby is done by ABO antigen grouping (forward grouping) only. Antibody grouping (reverse grouping) is not required. Confirmation of the Newborn's blood group is indicated when the A and B antigen expression and the agglutinins are fully developed (2-4 years).

Clinical Significance:

Liver functions test(LFT) are a set of tests for checking the amount of proteins, enzymes and bilirubin present in the blood. These tests help diagnose liver infection, liver disease or damage. Elevated or lower levels of one or more of these substances can be a sign of a liver problem.
