HEMATOLOGY

Investigation	Result	Normal Value
HbA1c	5.6 %	> 8 : Action Suggested 7-8 : Good Control < 7 : Goal 6-7 : Near Normal Glycemia < 6 : Non-diabetic Level
Estimated Average Glucose	114.02	

Explanation :

Total haemoglobin A1c is continuously synthesized in the red blood cell through its 120 days life span. The concentration of HbA1c in the cell reflects the average blood glucose concentration it encounters.

The level of HbA1c increases proportionately in patients with uncontrolled diabetes. It reflects the average blood glucose concentration over an extended period and remains unaffected by short-term fluctuations in blood glucose levels.

The measurement of HbA1c can serve as a convenient test for evaluating the adequacy of diabetic control and in preventing various diabetic complications. Because the average half life of a red blood cells is sixty days, HbA1c has been accepted as a measurement which reflects the mean daily blood glucose concentration, better than fasting blood glucose determination, and the degree of carbohydrate imbalance over the preceding two months.

It may also provide a better index of control of the diabetic patient without resorting to glucose loading procedures.

HbA1c ASSAY Interferences :

Falsely low values might be obtained from samples with abnormally elevated quantities of other Haemoglobins as a result of either their simultaneous elution with HbA1c(HbF) or differences in their glycation from that of HbA_{1c} (HbS).

23-11-2024	ANITABEN H THAKOR	F	BODY PROFILE	UF-TOTAL ABDOMEN USG

USG OF THE ABDOMEN/ PELVIS WAS PERFORMED

The liver is normal in size and echotexture. No focal solid or cystic lesions are seen. The intra hepatic biliary radicles are normal. The portal vein and CBD are normal. The gall bladder is contracted with no calculi or polyp. The wall is not thickened.

The pancreas reveals a normal echopattern, with no focal calcification or a neoplasm. The spleen reveals a normal sonographic features.

Both kidneys are normal in size and echotexture. Evidence of good cortico medullary differentiation is noted. No evidence of any calculi or hydronephrosis.

No free fluid or lymphadenopathy is seen.
The urinary bladder is well distended with no calculi or polyps.

The uterus is antverted, normal size.
The endometrium is in the midline. No focal myoma is seen.
Both the ovaries are normal in size and shape. No focal solid or cystic lesion is seen.

No adnexal abnormality is seen.
No free fluid is seen in the pouch of douglas.
Size in CM.
