**X-RAY CHEST (PA VIEW)**

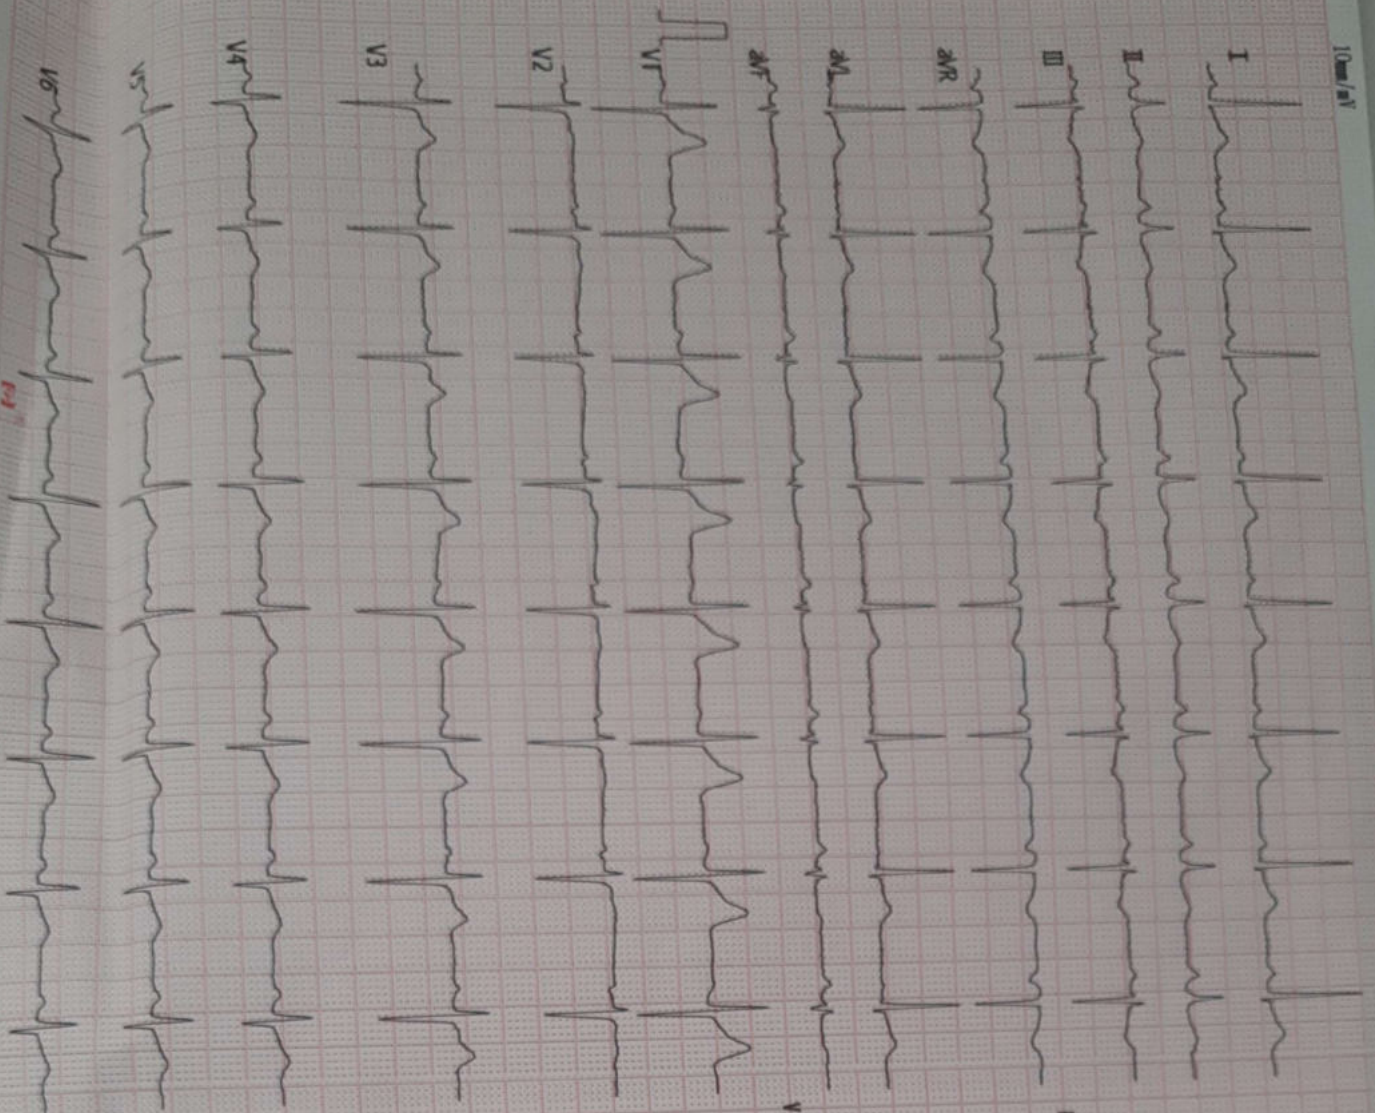

Both lung fields appear normal.  
No e/o Koch's lesion or consolidation seen.  
Both CP angles appear clear.  
Both domes of diaphragm appear normal.  
Heart size and aorta are within normal limits.  
Bony thorax under vision appears normal.  
Both hila appear normal.

**ULTRASOUND STUDY OF WHOLE ABDOMEN**

**LIVER** :

Liver is mid enlarged in size (16.6cm) & bright in echotexture. No focal mass lesion is seen. Intra hepatic biliary radicles are normal. Portal vein is normal in caliber.

**GALL BLADDER** :

Gall bladder is well distended. The wall thickness appears normal. No evidence of calculus or mass lesion is seen. C.B.D. appears normal.

**PANCREAS** :

Pancreas is normal in size, shape & echotexture. No focal mass lesion is seen.

**SPLEEN** :

Spleen is normal in size, shape & echotexture. No focal mass lesion is seen.

**BOTH KIDNEYS** :

Both kidneys are normal in size, shape & echotexture. Renal parenchyma appears normal. No evidence of hydronephrosis, calculus or cortical scarring is seen in either kidney.

Right kidney measures : 10.4 x 4.4 cms.

Left kidney measures : 11.2 x 4.8 cms.

**URINARY BLADDER** :

Urinary bladder is partially distended.

**PROSTATE** :

Prostate is normal in size, shape and echotexture. Volume: 21cc.

No obvious abdominal lymphadenopathy is seen.

No free fluid is seen in peritoneal cavity.

**OPINION:**

- Mild hepatomegaly with fatty liver grade I.

Dr. Bharat Jain

- LDL Cholesterol level is primary goal for treatment and varies with risk category and assesment
• For LDL Cholesterol level Please consider direct LDL value
Risk assessment from HDL and Triglyceride has been revised. Also LDL goals have changed.
• Detail test interpreation available from the lab
• All tests are done according to NCEP guidelines and with FDA approved kits.
• LDL Cholesterol level is primary goal for treatment and varies with risk category and assesment
# For test performed on specimens received or collected from non-KSHIPRA locations, it is presumed that the specimen belongs to the patient named or identified as labeled on the container/test request and such verification has been carried out at the point generation of the said specimen by the sender.
KSHIPRA will be responsible Only for the analytical part of test carried out. All other responsibility will be of referring Laboratory.
. All other responsibility will be of referring Laboratory.

------------------	---------------	-------------	---------------------------

### HEMOGLOBIN A1 C ESTIMATION

Specimen: Blood EDTA

Hb A1C <i>Boronate Affinity with Fluorescent Quenching</i>	6.2	% of Total Hb	Poor Control : > 7.0 % Good Control : 6.2-7.0 % Non-diabetic Level : 4.3-6.2 %
---	-----	---------------	--

Mean Blood Glucose <i>Calculated</i>	143.42	mg/dL	
---	--------	-------	--

#### **Degree of Glucose Control Normal Range:**

Poor Control >7.0% \*

Good Control 6.0 - 7.0 %\*\*Non-diabetic level < 6.0 %

\* High risk of developing long term complication such as retinopathy, nephropathy, neuropathy, cardiopathy, etc.

\* Some danger of hypoglycemic reaction in Type I diabetics.

\* Some glucose intolerant individuals and "subclinical" diabetics may demonstrate HbA1c levels in this area.

#### **EXPLANATION :-**

\*Total haemoglobin A1 c is continuously synthesised in the red blood cell through its 120 days life span. The concentration of HbA1c in the cell reflects the average blood glucose concentration it encounters.

\*The level of HbA1c increases proportionately in patients with uncontrolled diabetes. It reflects the average blood glucose concentration over an extended time period and remains unaffected by short-term fluctuations in blood glucose levels.

\*The measurement of HbA1c can serve as a convenient test for evaluating the adequacy of diabetic control and in preventing various diabetic complications. Because the average half life of a red blood cell is sixty days, HbA1c has been accepted as a measurement which reflects the mean daily blood glucose concentration, better than fasting blood glucose determination, and the degree of carbohydrate imbalance over the preceding two months.

\*It may also provide a better index of control of the diabetic patient without resorting to glucose loading procedures.

#### **HbA1c assay Interferences:**

\*Erroneous values might be obtained from samples with abnormally elevated quantities of other Haemoglobins as a result of either their simultaneous elution with HbA1c(HbF) or differences in their glycation from that of HbA(HbS)

## TEST REPORT

**Reg. No** : 2304101136  
**Name** : Akhilesh  
**Age/Sex** : 33 Years / Male  
**Ref. By** :  
**Client** : MEDIWHEEL WELLNESS

**Reg. Date** : 12-Apr-2023  
**Collected On** : 12-Apr-2023 08:51  
**Approved On** : 12-Apr-2023 11:18  
**Printed On** : 17-Apr-2023 08:43

Parameter	Result	Unit	Reference Interval
-----------	--------	------	--------------------

### THYROID FUNCTION TEST

T3 (Triiodothyronine) <i>Chemiluminescence</i>	1.71	ng/mL	0.87 - 1.81
T4 (Thyroxine) <i>Chemiluminescence</i>	11.81	µg/dL	5.89 - 14.9
TSH ( ultra sensitive ) <i>Chemiluminescence</i>	3.318	µIU/ml	0.34 - 5.6

**SUMMARY** The hypophyseal release of TSH (thyrotropic hormone) is the central regulating mechanism for the biological action of thyroid hormones. TSH is a very sensitive and specific parameter for assessing thyroid function and is particularly suitable for early detection or exclusion of disorders in the central regulating circuit between the hypothalamus, pituitary and thyroid. **LIMITATION** Presence of autoantibodies may cause unexpected high value of TSH

### URINE ROUTINE EXAMINATION

#### PHYSICAL EXAMINATION

Quantity : 20 cc  
Colour : Pale Yellow  
Appearance : Clear

#### CHEMICAL EXAMINATION ( BY REFLECTANCE PHOTOMETRIC METHOD)

pH	6.0	5.0 - 8.0
Sp. Gravity	1.010	1.002 - 1.03
Protein	Nil	
Glucose	Trace	
Ketone Bodies	Nil	
Urine Bile salt and Bile Pigment	Nil	
Urine Bilirubin	Nil	
Nitrite	Nil	
Leucocytes	Trace	
Blood	Nil	

#### MICROSCOPIC EXAMINATION (MANUAL BY MCIROSCOPY)

Leucocytes (Pus Cells)	4 - 5/hpf
Erythrocytes (Red Cells)	1 - 2/hpf
Epithelial Cells	1-2/hpf
Amorphous Material	Nil
Casts	Nil
Crystals	Nil
Bacteria	Nil
Monilia	Nil

### STOOL EXAMINATION

Consistency Semi Solid

#### CHEMICAL EXAMINATION

Occult Blood Negative

*Peroxidase Reaction with o-Dianisidine*

Reaction Acidic

*pH Strip Method*

Reducing Substance Absent

*Benedict's Method*

#### MICROSCOPIC EXAMINATION

Mucus Nil

Pus Cells 1 - 2/hpf

Red Cells Nil

Epithelial Cells Nil

Vegetable Cells Nil

Trophozoites Nil

Cysts Nil

Ova Nil

Neutral Fat Nil

Monilia Nil

**Note:** Stool occult blood test is highly sensitive to peroxidase like activity of free hemoglobin.

**False negative:** False negative occult blood test may be observed in case of excess (>250mg/day) Vitamin C intake and in case of occasional unruptured RBCs.

**False positive:** False positive occult blood test may be observed in stool samples containing vegetable peroxidase (turnips, horseradish, cauliflower, broccoli, cantaloupe, parsnips) and myoglobin from food (meat diet) intake.
