OPD	: OPD		

HAEMATOLOGY

	results	unit	reference
ESR / ERYTHROCYTE SEDIMENTATION RATE			
ESR (Erythrocyte Sedimentation Rate)	10	mm/1hr	00 - 22

Comments

The ESR is a simple non-specific screening test that indirectly measures the presence of inflammation in the body. It reflects the tendency of red blood cells to settle more rapidly in the face of some disease states, usually because of increases in plasma fibrinogen, immunoglobulins, and other acute-phase reaction proteins. Changes in red cell shape or numbers may also affect the ESR.

BIOCHEMISTRY

	results	unit	reference
BLOOD SUGAR F. Sodium Fluoride Pla			
Blood Sugar (F)	91.2	mg/dl	70 - 110

Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions.

High levels of serum glucose may be seen in case of Diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents.

Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

BIOCHEMISTRY

LIPID PROFILE.Serum

	results	unit	reference
S. Cholesterol	155.0	mg/dl	< - 200
HDL Cholesterol	50.1	mg/dl	35.3 - 79.5
LDL Cholesterol	85.2	mg/dl	50 - 150
VLDL Cholesterol	19.7	mg/dl	00 - 40
Triglyceride	98.4	mg/dl	00 - 170
Chloestrol/HDL RATIO	3.1	%	

INTERPRETATION:

Lipid profile Or lipid panel IS a panel of blood tests that serves as an initial screening tool for abnormalities in lipids, such as cholesterol and triglycerides. The results of this test can identify certain genetic diseases and can determine approximate risks for cardiovascular disease, certain forms of pancreatitis, and other diseases.

BLOOD SUGAR (PP).Serum

SUGAR PP	97.6	mg/dl	80 - 140
----------	------	-------	----------

Comments:

Accurate measurement if glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions. High levels of serum glucose may be seen in case of diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents. Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

INTERPRETATION

A Liver Function test or one or more of its component tests may be used to help diagnose liver disease if a person has symptoms that indicate possible liver dysfunction. If a person has a known condition or liver disease, testing may be performed at intervals to monitor liver status and to evaluate the effectiveness of any treatments.

TEST NAME

VALUE

ABO

"O"

Rh

POSITIVE

Comments:

Human red blood cell antigens can be divided into four groups A, B, AB AND O depending on the presence or absence of the corresponding antigens on the red blood cells. There are two glycoprotein A and B on the cell s surface that are responsible for the ABO types. Blood group is further classified as RH positive an RH negative.

URINE SUGAR (FBS)

CHEMICAL EXAMINATION

Glucose : Nil

URINE SUGAR (PPBS)

CHEMICAL EXAMINATION

Glucose : Nil

URINE EXAMINATION TEST

PHYSICAL EXAMINATION

Quantity: 20 ml

Color: Straw

Transparency: clear

CHEMICAL EXAMINATION

Albumin: nil

PH: Acidic

MICROSCOPIC EXAMINATION

Pus cells: 1-2 /HPF

RBC's: nil

Crystals: nil

Epithelial cells: 0-1 /HPF

Others: nil

Note:-

A urinalysis is a test of your urine. It's used to detect and manage a wide range of disorders, such as urinary tract infections, kidney disease and diabetes. A urinalysis involves checking the appearance, concentration and content of urine.

DIAGNOSTICS

Patient Name : Mr. SHAILENDRA KUMAR	Registration No
Age/Sex : 37 Y/Male	Registered : 31/Dec/2022
Patient ID : 012212310021	Collection : 31/Dec/2022 02:53PM
Barcode : 10130484	Received : 31/Dec/2022 02:56PM
Ref. By : Self	Reported : 31/Dec/2022 04:55PM
SRF No. :	Panel : SJM Hospital
Aadhar-Nation : - Indian	Passport No. :

Test Name	Value	Unit	Bio Ref.Interval
-----------	-------	------	------------------

HbA1C(Glycosylated Hemoglobin):EDTA

Hb A1C, GLYCOSYLATED Hb ,EDTA HPLC	5.40	%	
Average Glucose Calculated	108.28	mg/dL	<125.0

Interpretation:

AS PER AMERICAN DIABETES ASSOCIATION (ADA)

REFERENCE GROUP	HbA1c IN %
NON DIABETIC	< 6.0 %
GOOD CONTROL	6 – 7 %
FAIR CONTROL	7 – 8 %
ACTION SUGGESTED	FOR MORE THAN 8 %

Result done on : Tosoh Automated Glycohemoglobin Analyzer.

Comment :

Glycosylated Hb is a normal adult Hb which is covalently bounded to a glucose molecule. Glycosylated Hb concentration is dependent on the average blood glucose concentration and is stable for the life of the RBC (120 days). Glycohaemoglobin serves as suitable marker of metabolic control of diabetics. Its estimation is unaffected by diet, insulin, exercise on day of testing and thus reflects average blood glucose levels over a period of last several weeks /months. There is a 3 - 4 week time before percent Glycohaemoglobin reflects changes in blood glucose levels.

ADA criteria for correlation between HbA1c & Mean plasma glucose levels.

1. Glycosylated hemoglobin (HbA1c) test is three monthly monitoring done to assess compliance with therapeutic regimen in diabetic patients.
2. Since Hb1c reflects long term fluctuations in blood glucose concentration, a diabetic patient who has recently under good control may still have high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.
3. Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targeting a goal of < 7.0%

-----------	-------	------	------------------

may not be appropriate.

4.High HbA1c (>9.0 -9.5 %) is strongly associated with risk of development and rapid progression of microvascular and nerve complications

5.Any condition that shorten RBC life span like acute blood loss, hemolytic anemia falsely lower HbA1c results.

6.HbA1c results from patients with HbSS,HbSC and HbD must be interpreted with caution , given the pathological processes including anemia,increased

red cell turnover, and transfusion requirement that adversely impact HbA1c as a marker of long-term glycemc control.

7.Specimens from patients with polycythemia or post-splenctomy may exhibit increase in HbA1c values due to a somewhat longer life span of the red cells.

ULTRASOUND WHOLE ABDOMEN REPORT

FINDINGS:

Gaseous Abdomen

Liver is normal in size measuring 13.4 cm with increased parenchymal echotexture. No focal lesion is seen. Intra hepatic biliary radicals are normal. Portal vein is normal in course and caliber.

Gall bladder – Distended and normal

Pancreas is normal in size, outline and echotexture. No focal lesion is seen. No evidence of calcification is seen.

Spleen is normal in size measuring 8.0cm and normal echotexture. Splenic vein is normal.

Right kidney is normal in size, outline and echogenicity. Corticomedullary differentiation is maintained .

Right kidney measures 10.1x4.1 cm.

Left kidney is normal in size, outline and echogenicity. Corticomedullary differentiation is maintained.

Left kidney measures 10.4x4.5 cm.

Retroperitoneum does not reveal any obvious abnormality.

Urinary bladder is distended with normal wall thickness.

Prostate is normal in size, shape and echotexture on the per abdominal examination. Prostatic capsule appears intact. No focal lesion is seen.

No free fluid is seen in the peritoneal cavity

IMPRESSION:

GASEOUS ABDOMEN

FATTY LIVER GRADE- I

ADVISED: CLINICAL CORELATION

X-Ray Report

Patient ID.	20782 OPD	Name	MR SHAILENDRA KUMAR	Sex/Age	M/37Y
Date	31-12-2022 10:40 AM	Ref. Physician	SELF	CHEST, CHEST	

X-RAY CHEST PA VIEW

OBSERVATION:

The lung fields are clear.

Both hila are normal.

Cardiophrenic and costophrenic angles are normal.

The trachea is central.

The mediastinal and cardiac silhouette are normal.

Cardiothoracic ratio is normal.

Bones of the thoracic cage are normal.

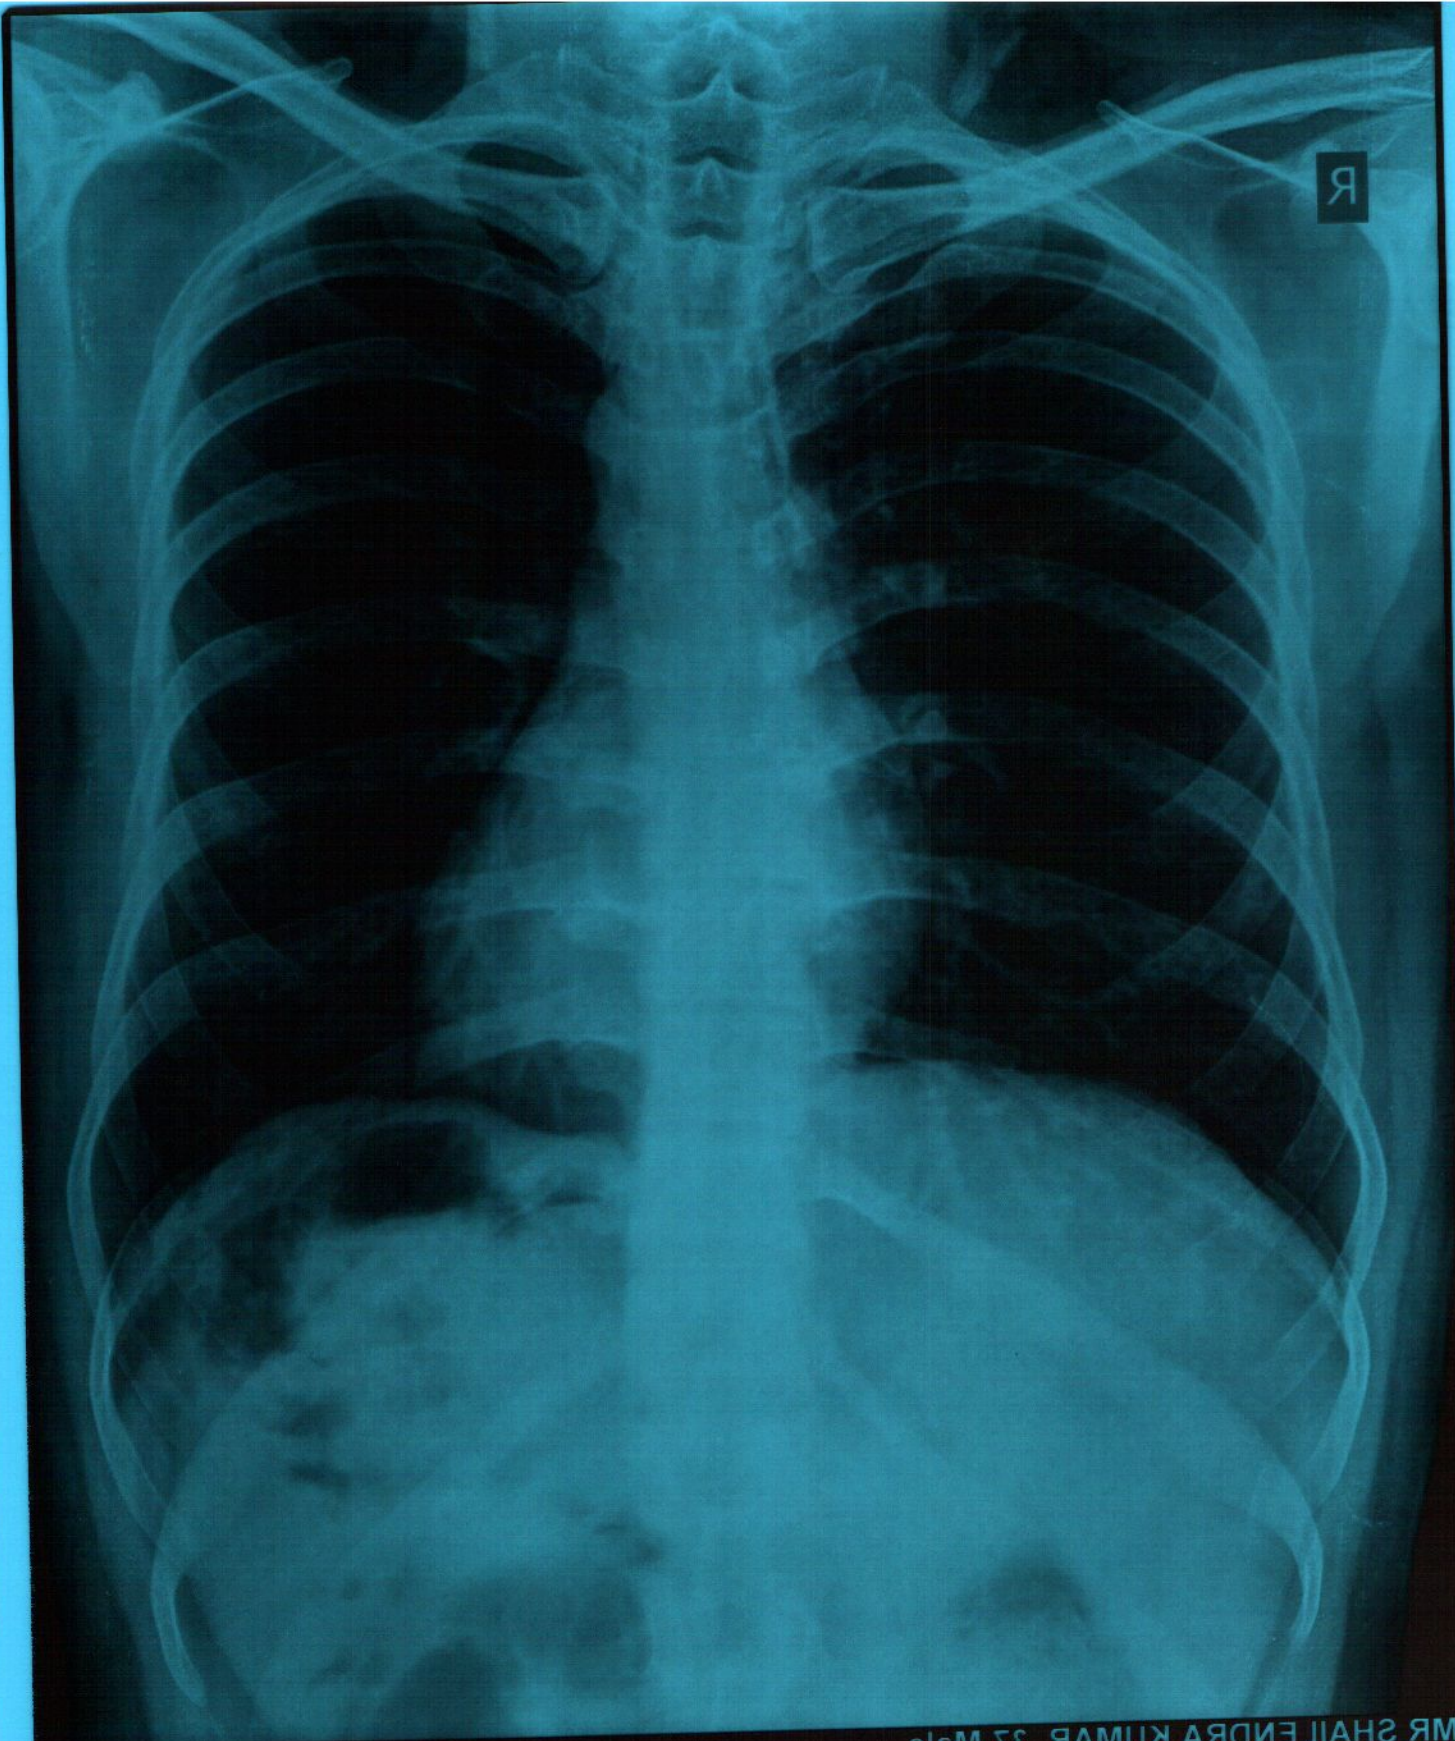

Soft tissues of the chest wall are normal.

IMPRESSION:

- No significant abnormality seen.
