**HAEMATOLOGY**

**HbA1c (GLYCOSYLATED HEMOGLOBIN)**

5.0

%

> 8% Action Suggested

7 - 8 % Good Control

6 - 7 % Near Normal Glycemia

< 6% Normal level

**BLOOD**

Method : Nephelometry Methodology

**Instrument: Mispa i2**

**Clinical Information:**

Glycated hemoglobin measurement is not appropriate where there has been a change in diet or treatment within 6 weeks. Hence, people with recent blood loss, hemolytic anemia, or genetic differences in the hemoglobin molecule (hemoglobinopathy and Hb variants viz: HbS, HbC, HbE, HbD, elevated HbF, as well as those that have donated blood recently, are not suitable for this test. Conditions associated with false increased HbA1C values: HbF, Uremia, Lead Poisoning, Hypertriglyceridemia, Alcoholism, Opiate addiction, Iron deficiency state, Postsplenectomy, Hyperbilirubinemia, Chronic aspirin therapy. Conditions associated with false low HbA1C values: HbS, HbC, Hemolytic anemia, Pregnancy, Acute or chronic blood loss

**AVERAGE BLOOD GLUCOSE**

96.80

90 - 120 Very Good Control

121 - 150 Adequate Control

151 - 180 Sub-optimal Control

181 - 210 Poor Control

> 211 Very Poor Control

**Collected Date & Time :** Feb 10, 2024, 01:05 p.m.

**Reported Date & Time :** Feb 10, 2024, 03:52 p.m.

**Sample ID :**

Test Description	Value(s)	Unit(s)	Reference Range
<b>IMMUNOLOGY</b>			
T3-Triiodothyronine Method : CHEMILUMINESCENCE	1.34	ng/mL	0.60-1.81
T4-Thyroxine Method : CHEMILUMINESCENCE	10.1	ug/dL	4.5 -10.9
TSH -ULTRA SENSITIVE Method : CHEMILUMINESCENCE	1.78	uIU/mL	0.35-5.50

**Interpretation:**

TSH measurement is useful in screening and diagnosis for euthyroidism, hyperthyroidism and hypothyroidism. TSH levels may be affected by acute illness and drugs like doapmine and glucocorticoids. Low or undetectable TSH is suggestive of graves disease TSH between 5.5 to 15.0 with normal T3 T4 indicates impaired thyroid hormone or subclinical hypothyroidism or normal T3 T4 with slightly low TSH suggests subclinical Hyperthyroidism. TSH suppression does not reflect severity of hyperthyroidism therefore , measurement of FT3 FT4 is important. FreeT3 is first hormone to increase in early Hyperthyroidism. Only TSH level can prove to be misleading in patients on treatment. Therefore FreeT3 , FreeT4 along with TSH should be checked.

------------------	----------	---------	-----------------

**BIOCHEMISTRY**

Gamma GT	18.6	U/L	5-36
----------	------	-----	------

Method : G-Glutamyl-Carboxy-Nitroanilide

**Interpretation**

A high GGT level can help rule out bone disease as the cause of an increased ALP level, but if GGT is low or normal, then an increased ALP is more likely due to bone disease. Even small amounts of alcohol within 24 hours of a GGT test may cause a temporary increase in the GGT.
