

Patient Name: Deepmala Poojar

Age: 24 yrs/ Female.

Ref By:

Date: 27 .02. 2023.

ULTRASOUND EXAMINATION OF ABDOMEN AND PELVIS

History: Amenorrhea since 3 months. UPT not done.

Liver is normal size and echotexture. No focal mass. Hepatic and portal veins are normal.

Gall Bladder is well distended. Its walls are thin. No intrinsic pathology. CBD is unremarkable. No intrahepatic biliary dilatation.

Pancreatic head appears normal. Body and tail of pancreas obscured by gas shadow.

Spleen is normal in size and texture.

Both kidneys are normal in texture. Left kidney appears normal in size. **Right kidney appears relatively smaller in size.** Corticomedullary differentiation is intact. No hydronephrosis/calculus is seen.

RK: 8.7 cm

LK: 10.5 cm

Visualized bowel loops are normal in calibre and peristalsis.

No ascites. No obvious enlarged nodes.

Urinary Bladder is distended. Its walls are thin. No intrinsic pathology seen.

Uterus and ovaries could not be assessed due to non availability of TVS probe. On TAS pelvic organs are not clearly visualised. Needs TVS.

Impression:

Relatively smaller right kidney.

Uterus and ovaries could not be assessed due to non availability of TVS probe. Needs further evaluation with transvaginal sonography and also needs UPT correlation in view of amenorrhea.

Dr. Punya J
