Method :

Note : URINE CULTURE :

Presence of >10⁵ cfu/ml (100000) in midstream urine sample is considered clinically significant. However in symptomatic patients or urine sample collection from catheter or patients with indwelling catheters, even a smaller count of bacteria may signify infection (100-10000cfu/ml). Kindly correlate clinically.

Note : Clinical Significance:

Thyroid function tests (TFTs) is a collective term for blood tests used to check the function of the thyroid. TFTs may be requested if a patient is thought to suffer from hyperthyroidism (overactive thyroid) or hypothyroidism (underactive thyroid), or to monitor the effectiveness of either thyroid-suppression or hormone replacement therapy. It is also requested routinely in conditions linked to thyroid disease, such as atrial fibrillation and anxiety disorder. A TFT panel typically includes thyroid hormones such as thyroid-stimulating hormone (TSH, thyrotropin) and thyroxine (T4), and triiodothyronine (T3) depending on local laboratory policy.

Note: Please correlate with clinical condition

An aid in the early detection of Prostate cancer in Male. Follow up and management of Prostate cancer patients. Detect metastatic or persistent disease in patients following surgical or medical treatment of Prostate cancer

Note: -

False negative / positive results are observed in patients receiving mouse monoclonal antibodies for diagnosis or therapy. PSA levels may appear consistently elevated / depressed due to the interference by heterophilic antibodies & non-specific protein binding. PSA values regardless of levels should not be interpreted as absolute evidence of the presence or absence of disease. All values should be correlated with clinical findings and results of other investigations.
