### Investigation

**PSA- Total**  
(Serum,ECLIA)

### Observed Value

0.775

### Unit

ng/mL

### Biological Reference Interval

Conventional for all ages: <=4  
40 - 49 yrs: 0 - 2.5

### INTERPRETATION :

Prostate-specific antigen (PSA) is a glycoprotein that is produced by the prostate gland, the lining of the urethra, and the bulbourethral gland. PSA exists in serum mainly in two forms, complexed to alpha-1-anti-chymotrypsin (PSA-ACT complex) and unbound (free PSA). Increases in prostatic glandular size and tissue damage caused by benign prostatic hypertrophy, prostatitis, or prostate cancer may increase circulating PSA levels. Transient increase in PSA can also be seen following per rectal digital or sonological examinations.

### Abbreviation :

ECLIA : Electrochemiluminescence Immunoassay
