THYROID PROFILE

T3	:	1.0	ng/mL	0.7- 1.7
T4	:	9.2	ug/dL	4.5-12.5
TSH	:	2.40	uIU/ml	0.5- 5.0

INTERPRETATION

Serum T3, T4 and TSH measurements form three components of thyroid screening panel and are useful in diagnosing various disorders of thyroid gland function.

1. Primary hyperthyroidism is accompanied by elevated serum T3 & T4 values alongwith depressed TSH.
2. Primary hypothyroidism is accompanied by depressed serum T3 and T4 values & elevated serum TSH
3. Normal T4 levels accompanied by high T3 levels are seen in patients with T3 thyrotoxicosis.
4. Slightly elevated T3 levels may be found in pregnancy and in estrogen therapy while depressed levels may be encountered in severe illness, malnutrition, renal failure and during therapy with drugs like propranolol and propylthiouracil.
5. Although elevated TSH levels are nearly always indicative of primary hypothyroidism, rarely they can result from TSH secreting pituitary tumours (secondary hyperthyroidism).
