

# USG OF WHOLE ABDOMEN

<u>*Clinical profile*</u>: for routine checkup. Patient denies any health related issues at present with no history of medical or surgical problems in the past. History of cesarean section in Feb 22. No previous reports provided at the time of ultrasound study.

Real time ultrasonography of whole abdomen was performed using transabdominal approach only.

## Liver:

Liver is normal in size (13.1 cm) and echopattern. No focal mass lesion is seen. The intrahepatic biliary radicals are normal. Hepatic veins & IVC are normal in caliber. Portal vein is normal in caliber and measures 9.5 mm.

## Gallbladder:

**Gallbladder** is well distended and reveals normal wall thickness. No evidence of calculus or mass lesion seen. No obvious pericholecystic collection visualized. **CBD** is normal in caliber (3.9 mm).

## Spleen:

Spleen is normal in size (8.5 cm), shape and echotexture. No focal lesions seen. Splenic vein appears normal in caliber.

## Pancreas:

Pancreas is visualized and is normal in size shape and echopattern. No focal lesions seen. Part of pancreatic tail and adjacent retroperitoneum obscured due to bowel gases.

## Kidneys:

Both kidneys are normal in size, shape and position. No evidence of hydronephrosis, calculi or scarring.

Right Kidney measures: 10.0 x 3.6 cm.

Left Kidney measures: 10.0 x 4.4 cm.

Corticomedullary differentiation appears preserved.

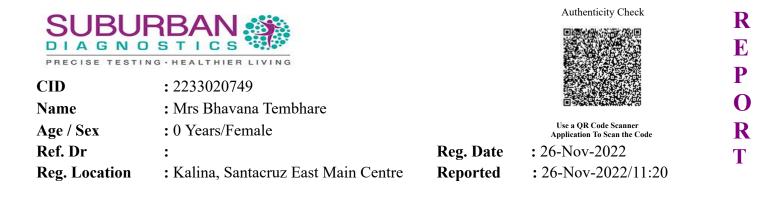

No evidence of free fluid in abdomen and pelvis. Visualized retroperitoneum appears unremarkable with no obvious lymphadenopathy.

## Urinary bladder:

Urinary bladder is well distended and shows normal wall thickness. No evidence of any calculi or focal mass lesion is seen within it.

## **Uterus:**

Click here to view images http://3.111.232.119/iRISViewer/NeoradViewer?AccessionNo=2022112609310736

Uterus is anteverted, bulky in size and shows normal echotexture.

It measures 10.1 x 4.7 x 3.4 cm (Volume ~87.9 cc).

No evidence of focal mass lesion is seen within it.

Endometrium shows normal appearance and thickness measures 6.9 mm.

An ill-defined roughly triangular hypoechoic area seen extending from anterior wall of the uterus near fundus to anterior abdominal wall - probably representing post operative changes.

## Both ovaries:

Both ovaries are normal in size and echotexture.

Right ovary measures: 3.2 x 2.2 cm. A small 12 x 9 mm sized right para-ovarian simple cystic area seen medially.

Left ovary measures: 2.6 x 1.2 cm.

There is no evidence of pelvic or adnexal mass seen. There is no free fluid in pouch of Douglas.

## **IMPRESSION**

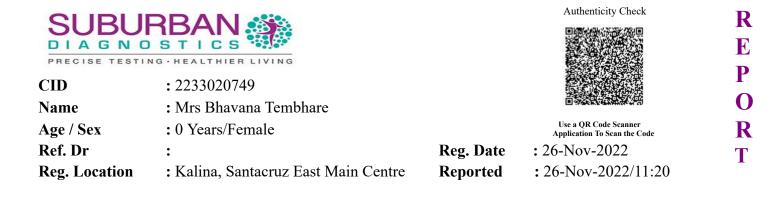

Mildly bulky uterus. No focal lesion. Post operative changes on anterior aspect of uterus. Tiny right para-ovarian simple cyst.

-----End of Report-----

This report is prepared and physically checked by Dr Vaseem Anjum Ansari before dispatch.

Dr Vaseem Anjum Ansari Radiologist (MBBS,DMRD) Reg No. 2003/06/2275

Investigations have their limitations. Solitary Pathological / Radiological and other investigations never confirm the final diagnosis of disease. They only help in diagnosing the disease in correlation to clinical symptoms and other related tests. Please interpret accordingly.

# X-RAY CHEST PA VIEW

Both lung fields are clear.

Both costo-phrenic angles are clear.

The cardiac size and shape are within normal limits.

The domes of diaphragm are normal in position and outlines.

The skeleton under review appears normal.

# **IMPRESSION:** NO SIGNIFICANT ABNORMALITY IS DETECTED.

-----End of Report-----

This report is prepared and physically checked by Dr Vaseem Anjum Ansaribefore dispatch.

#### **AERFOCAMI HEALTHCARE BELOW 40 MALE/FEMALE** GLYCOSYLATED HEMOGLOBIN (HbA1c) RESULTS BIOLOGICAL REF RANGE METHOD

Glycosylated Hemoglobin (HbA1c), EDTA WB - CC	5.0	Non-Diabetic Level: < 5.7 % Prediabetic Level: 5.7-6.4 % Diabetic Level: >/= 6.5 %	HPLC
Estimated Average Glucose (eAG), EDTA WB - CC	96.8	mg/dl	Calculated

### Intended use:

PARAMETER

- In patients who are meeting treatment goals, HbA1c test should be performed at least 2 times a year
- In patients whose therapy has changed or who are not meeting glycemic goals, it should be performed quarterly
- For microvascular disease prevention, the HbA1C goal for non pregnant adults in general is Less than 7%.

### **Clinical Significance:**

- HbA1c, Glycosylated hemoglobin or glycated hemoglobin, is hemoglobin with glucose molecule attached to it.
- The HbA1c test evaluates the average amount of glucose in the blood over the last 2 to 3 months by measuring the percentage of glycosylated hemoglobin in the blood.

### Test Interpretation:

- The HbA1c test evaluates the average amount of glucose in the blood over the last 2 to 3 months by measuring the percentage of Glycosylated hemoglobin in the blood.
- HbA1c test may be used to screen for and diagnose diabetes or risk of developing diabetes.
- To monitor compliance and long term blood glucose level control in patients with diabetes.
- Index of diabetic control, predicting development and progression of diabetic micro vascular complications.

### Factors affecting HbA1c results:

Increased in: High fetal hemoglobin, Chronic renal failure, Iron deficiency anemia, Splenectomy, Increased serum triglycerides, Alcohol ingestion, Lead/opiate poisoning and Salicylate treatment.

Decreased in: Shortened RBC lifespan (Hemolytic anemia, blood loss), following transfusions, pregnancy, ingestion of large amount of Vitamin E or Vitamin C and Hemoglobinopathies

Reflex tests: Blood glucose levels, CGM (Continuous Glucose monitoring)

References: ADA recommendations, AACC, Wallach's interpretation of diagnostic tests 10th edition.

## AERFOCAMI HEALTHCARE BELOW 40 MALE/FEMALE BLOOD GROUPING & Rh TYPING

## PARAMETER

## **RESULTS**

ABO GROUP O Rh TYPING POSITIVE

NOTE: Test performed by automated column agglutination technology (CAT) which is more sensitive than conventional methods.

Note: This sample is not tested for Bombay blood group.

Specimen: EDTA Whole Blood and/or serum

### Clinical significance:

ABO system is most important of all blood group in transfusion medicine

### Limitations:

- ABO blood group of new born is performed only by cell (forward) grouping because allo antibodies in cord blood are of maternal origin.
- Since A & B antigens are not fully developed at birth, both Anti-A & Anti-B antibodies appear after the first 4 to 6 months of life. As a result, weaker reactions may occur with red cells of newborns than of adults.
- Confirmation of newborn's blood group is indicated when A & B antigen expression and the isoagglutinins are fully developed at 2 to 4 years of age & remains constant throughout life.
- · Cord blood is contaminated with Wharton's jelly that causes red cell aggregation leading to false positive result
- The Hh blood group also known as Oh or Bombay blood group is rare blood group type. The term Bombay is used to refer the phenotype that lacks normal expression of ABH antigens because of inheritance of hh genotype.

Interpretation:

CID

Name

A thyroid panel is used to evaluate thyroid function and/or help diagnose various thyroid disorders.

#### **Clinical Significance:**

1)TSH Values between high abnormal upto15 microIU/ml should be correlated clinically or repeat the test with new sample as physiological factors

can give falsely high TSH.

2)TSH values may be trasiently altered becuase of non thyroidal illness like severe infections, liver disease, renal and heart severe burns, trauma and surgery etc.

TSH	FT4 / T4	FT3 / T3	Interpretation
High	Normal	Normal	Subclinical hypothyroidism, poor compliance with thyroxine, drugs like amiodarone, Recovery phase of non- thyroidal illness, TSH Resistance.
High	Low	Low	Hypothyroidism, Autoimmune thyroiditis, post radio iodine Rx, post thyroidectomy, Anti thyroid drugs, tyrosine kinase inhibitors & amiodarone, amyloid deposits in thyroid, thyroid tumors & congenital hypothyroidism.
Low	High	High	Hyperthyroidism, Graves disease, toxic multinodular goiter, toxic adenoma, excess iodine or thyroxine intake, pregnancy related (hyperemesis gravidarum, hydatiform mole)
Low	Normal	Normal	Subclinical Hyperthyroidism, recent Rx for Hyperthyroidism, drugs like steroids & dopamine), Non thyroidal illness.
Low	Low	Low	Central Hypothyroidism, Non Thyroidal Illness, Recent Rx for Hyperthyroidism.
High	High	High	Interfering anti TPO antibodies, Drug interference: Amiodarone, Heparin, Beta Blockers, steroids & anti epileptics.

**Diurnal Variation:**TSH follows a diurnal rhythm and is at maximum between 2 am and 4 am, and is at a minimum between 6 pm and 10 pm. The variation is on the order of 50 to 206%. Biological variation:19.7% (with in subject variation)

Reflex Tests: Anti thyroid Antibodies, USG Thyroid , TSH receptor Antibody. Thyroglobulin, Calcitonin

#### Limitations:

1. Samples should not be taken from patients receiving therapy with high biotin doses (i.e. >5 mg/day) until atleast 8 hours

following the last biotin administration.

2. Patient samples may contain heterophilic antibodies that could react in immunoassays to give falsely elevated or depressed results. this assay is designed to minimize interference from heterophilic antibodies.
