CYTOPATHOLOGY NO.: C-332/22 F/2826/22 **CYTOLOGY**

**SPECIMEN SUBMITTED:** 2 Conventional cervical smears.

**SPECIMEN ADEQUACY:** Satisfactory for evaluation; Endocervical transformation zone component present.

**MICROSCOPIC EXAMINATION:**

**Squamous cell population:**

- Superficial - Present.
- Intermediate - present.
- Parabasal - Occasional present.
- Inflammation - Moderate.
- Atypical cells - Not present.
- Background bacterial flora - Maintained.

**INTERPRETATION:**

- Negative for squamous intraepithelial lesion or malignancy.
- Inflammation with associated reactive cellular changes.

**COMMENT:**

1. The smears are reported using the Bethesda system (2014) for reporting cervical cytology.
2. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false-negative and false-positive results. Technologies such as liquid-based preparations may decrease but will not eliminate all false negative results. Follow-up of unexplained clinical signs and symptoms is recommended to minimize false-negative results.
3. In patients with squamous or glandular intraepithelial abnormalities, further diagnostic follow-up procedures, such as HPV testing, colposcopy / biopsy with endocervical sampling are suggested, as clinically indicated.
