<b>PSA, TOTAL</b>	0.90	0.00 - 4.00	ng/ml

**PSA, TOTAL****Method :**

Enhanced Pulse Chemiluminescence Assay

**Remarks:**

1. PSA is elevated in benign prostatic hyperplasia (BPH). Clinically an elevated PSA value is not of diagnostic value as a specific test for cancer and should only be used in conjunction with other clinical manifestations (observations) and diagnostic procedures such as prostate biopsy and DRE (Digital Rectal Examination) report.
2. Free PSA determinations may be helpful in regards to the differential diagnosis of BPH and prostate cancer conditions

PSA level in man increases as their age advances. Hence the requirement of age – specific values is a must.

**THYROID PROFILE (T3,T4,TSH)**

T3	0.81	0.60 - 1.81	ng/ml
T4	7.2	4.50 - 10.90	ug/dl

**THYROID PROFILE****Remarks:**

- Total serum T3 and T4 concentration is dependent upon a multiplicity of factors: thyroid gland function and its regulation, thyroxin binding globulin (TBG) concentration, and the binding of T3 & T4 to TBG. Thus, total T3 & T4 concentration alone is not sufficient to assess the clinical status.
- A decrease in total tri - iodothyronine values is found with protein - wasting diseases, certain liver diseases & administration of testosterone, diphenylhydantoin or salicylates
- Serum TSH values may be elevated by pharmacological intervention, Domperidone, amiodazon, iodide, Phenobarbital, phenytoin have been reported to increase TSH levels
