The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author outlines the various methods used to collect and analyze the data. This includes both primary and secondary data collection techniques. The primary data was gathered through direct observation and interviews with key stakeholders. Secondary data was obtained from existing reports and databases.

The analysis phase involved using statistical software to identify trends and correlations within the data. The results show a clear upward trend in the number of transactions over the period studied. This is likely due to increased market activity and improved infrastructure.

Finally, the document concludes with a series of recommendations for future research and implementation. It suggests that further studies should focus on the long-term sustainability of the current trends and the impact of external factors. Additionally, it recommends that the findings be used to inform policy decisions and improve operational efficiency.

GLYCATED HEMOGLOBIN (HBA1C), (Sample Received On:5 Nov, 2024 9:33:00 AM) GLYCATED HEMOGLOBIN[HPLC]	5.2	%	"Non-Diabetic HbA1c < 5.6 Fasting plasma glucose <100 Pre - Diabetes HbA1c 5.7 - 6.4 Fasting plasma glucose 100 - 125 Diabetes HbA1c > 6.5 Fasting plasma glucose > 126"	Plasma(EDTA)
ESTIMATED AVERAGE GLUCOSE	103	mg/dL		

Note : Any condition altering red cell life will alter the GHB values. Low Hb% values may not correlate with GHB. GHB value should not be taken as a sole criteria for diagnosis. GHB gives average Blood Glucose level for the period of 10 - 12 wks & it need not correlate with blood sugar levels. For Geriatric group, HbA1c reference range depends upon comorbid conditions.
