## THYROID FUNCTION TEST

Test Name	Result	Units	Biological Reference Interval
Serum T3 :	0.92	ng/ml	[0.60 - 1.81]
Serum T4 :	5.16	µg/dl	[4.50 - 10.90]
Serum TSH : (CHEMILUMINESCENCE)	3.154	µIU/ml	[0.55 - 4.78]

Thyroid stimulating hormone (TSH) is synthesized and secreted by the anterior pituitary in response to a negative feedback mechanism involving concentrations of FT3 (free T3) and FT4 (free T4). Additionally, the hypothalamic tripeptide, thyrotropin-releasing hormone (TRH), directly stimulates TSH production. TSH stimulates thyroid cell production and hypertrophy, also stimulate the thyroid gland to synthesize and secrete T3 and T4. Quantification of TSH is significant to differentiate primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

- TSH levels During Pregnancy :
- First Trimester : 0.1 to 2.5 µIU/mL
  - Second Trimester : 0.2 to 3.0 µIU/mL
  - Third trimester : 0.3 to 3.0 µIU/mL

## HBA1C [Glycosylated Haemoglobin]

Test Name	Result	Units	Biological Reference Interval
Glycosylated Haemoglobin : (HBA1C)	7.1	%	Excellent control: 4.2-6.2 Good Control : 6.3-7.2 Fair Control : 7.3-8.2 Poor Control : >8.3
Estimated Average glucose :	157.07	mg/dl	

Comment

\*As per the new 2009 update of American Diabetes Association regarding HbA1C & Mean Blood Glucose relationship.

NOTE:

blood glucose

This test is used to monitor diabetic patients compliance with the therapeutic regimen and long term blood glucose control. It's level is proportional to both the average concentration and the life span of the red blood cells (RBC) in circulation. HbA1c values are free of day to day glucose fluctuations and are unaffected by exercise or recent food intake.

## Prostate specific antigen - PSA

Test Name	Result	Units	Biological Reference Interval
Prostate Specific Antigen (PSA):	1.56	ng/ml	[ 0.0 - 4.0 ]

- \* Generally recommended in : prostatic malignancy
- \* Schedule for tumour marker determination  
Pre-operatively  
Post operatively - At regular intervals until the values have shown a marked decrease.
- \* Potential clinical applications of tumour markers are :

Prognosis - The level of tumour marker is corresponds to the mass of tumour. Moderate elevations are suggestive of better prognosis than persistent high levels.  
Monitoring - The profile of tumour marker concentration against time can mirror the condition of patients diagnosed to have cancer.

- \* Tumour marker profile usually reflects one of the following classical patterns :

A rapid decline in the concentration following surgery or therapy indicates successful treatment. The lack of a decline to basal level following first line therapy indicates partial success in the treatment.

Continue low level of the tumour marker indicates that remission has been maintain.

A subsequent rise in the concentration of the tumour marker suggests a recurrence of the disease.

If tumour marker concentration remain elevated after treatment, the tumour may be resistant to the therapeutic method and prognosis is poor.

## ULTRASOUND WHOLE ABDOMEN

(Screening Only)

**Liver** is normal in size and shows normal parenchymal reflectivity. No focal lesion is seen. Hepatic veins appear normal. There is no evidence of any dilated intra hepatic biliary radicals.

**Portal Vein** appears normal in diameter. **Common Bile Duct** is of normal diameter.

**Gallbladder** is distended with normal wall thickness. There is no evidence of gallstones. No evidence of peri-cholecystic fluid or probe tenderness.

**Pancreas** is normal in size and shows homogenous reflectivity. There is no evidence of any calcification or ductal dilatation.

**Spleen** is normal size and shows a homogenous echotexture. There is no evidence of any focal lesion.

**Both Kidneys** are normal in position and size. They show normal cortical reflectivity and cortico-medullary distinction. Right kidney measures 100x49 mm. Left kidney measures 98x50mm. There is no evidence of renal calculi, hydronephrosis or mass seen.

**Bladder** is well distended and shows normal wall thickness. No evidence of intra-luminal mass or calculi.

**Prostate gland** is normal in size. It has smooth outlines and normal reflectivity. There is no evidence of ascites.

No evidence of any gross bowel mass seen.

No evidence of any aorto-caval or mesenteric root lymphadenopathy.

Appendix cannot be imaged. No mass or collection in right iliac fossa.

**CONCLUSION:** No sonographic abnormality is seen.
