Forward Blood Group : O Rh Positive
Reverse Blood Group : O
Final Blood Group : O Rh Positive
Remark :

Transfusion Medicine

Note : Blood group is identified by ABO antigens (forward grouping) present on red cell membrane And anti-ABO antibodies (reverse grouping) present in the plasma. A grouping discrepancy is when there is a mismatch in forward and reverse Blood grouping. Special methods need to be Performed to solve such discrepancies.

In case of Newborn/cord blood grouping, only forward blood grouping would be done as the anti-ABO antibodies (for reverse grouping) Are not present till 4 to 6 months of age. Thus new born grouping should be considered as provisional report and should be supplemented by re-blood grouping after 4 to 6 months of age/ or by more sensitive tests like molecular blood grouping.

"Blood grouping is done on the received sample. In case of any suspected discrepancy, Blood centre should be contacted , 1724692270"

RECOVERY		02:09	0.00	0.00	112	110/80	

The patient exercised according to the BRUCE for 8:26 min:s, achieving a work level of Max. METS: 10.20. The resting heart rate of 87 bpm rose to a maximal heart rate of 160 bpm. This value represents 89 % of the maximal, age-predicted heart rate. The resting blood pressure of 110/70 mmHg, rose to a maximum blood pressure of 130/80 mmHg. The exercise test was stopped due to Target heart rate achieved.

Interpretation

Summary: Resting ECG: normal.
Functional Capacity: normal.
HR Response to Exercise: appropriate.
BP Response to Exercise: normal resting BP - appropriate response.
Chest Pain: none.
Arrhythmias: none.
ST Changes: none.
Overall impression: Normal stress test.
