BIOCHEMISTRY

results unit reference

CHOLESTEROL TOTAL

Chloestrol 154.0 mg/dl < - 200

Comments:-

Measurement of serum cholesterol levels can serve as an indicator of liver function, biliary function, intestinal absorption, propensity towards coronary artery disease, thyroid function and adrenal disease. Cholesterol levels are important in the diagnosis and classification of hyperlipoproteinaemias. Stress, age, gender, hormonal balance and pregnancy affect normal cholesterol levels.

CREATININE-SERUM

Serum Creatinine 0.67 mg/dl 0.6 - 1.1

Comments:

A creatinine test is a measure of how well your kidneys are performing their job of filtering waste from your blood. Creatinine is a chemical compound left over from energy-producing processes in your muscles. Healthy kidneys filter creatinine out of the blood. Creatinine exits your body as a waste product in urine.

SGPT / ALT,Serum

SGPT/ALT 16.40 IU/L 00 - 34

Comments:

An enzyme found in the liver and other tissues. A high level of SGPT released into the blood may be a sign of liver damage, cancer, or other diseases. Also called alanine transferase and serum glutamate pyruvate transaminase .

HAEMATOTOLOGY

results	unit	reference
---------	------	-----------

ESR / ERYTHROCYTE SEDIMENTATION RATE

ESR (Erythrocyte Sedimentation Rate)	34	mm/1hr	00 - 20
--------------------------------------	-----------	--------	---------

Comments

The ESR is a simple non-specific screening test that indirectly measures the presence of inflammation in the body. It reflects the tendency of red blood cells to settle more rapidly in the face of some disease states, usually because of increases in plasma fibrinogen, immunoglobulins, and other acute-phase reaction proteins. Changes in red cell shape or numbers may also affect the ESR.

BIOCHEMISTRY

results	unit	reference
---------	------	-----------

BLOOD SUGAR F, Sodium Fluoride Pla

Blood Sugar (F)	86.30	mg/dl	70 - 110
-----------------	-------	-------	----------

Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions.

High levels of serum glucose may be seen in case of Diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents.

Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

TEST NAME

VALUE

ABO

"A"

Rh

POSITIVE

Comments:

Human red blood cell antigens can be divided into four groups A, B, AB AND O depending on the presence or absence of the corresponding antigens on the red blood cells. There are two glycoprotein A and B on the cell s surface that are responsible for the ABO types. Blood group is further classified as RH positive an RH negative.

PATIENT ID	: 30086 OPD	X-Ray Report	PATIENT NAME	: MS NAINCY CHAUDHARY
AGE	: 022Y		SEX	: Female
REF. PHY.	:		STUDY DATE	: 07-Sep-2024

RADIOLOGY REPORT EXAM: X RAY CHEST

CLINICAL HISTORY: NA

COMPARISON:
None.

TECHNIQUE:
Frontal projections of the chest were obtained.

FINDINGS:
Bilateral bulky hila seen.
Prominent bronchovascular markings seen in both lung fields.
Both costophrenic angles appear normal.
The tracheal lucency is centrally placed.
The mediastinal and diaphragmatic outlines appear normal.
The heart shadow is normal.
The bony thoracic cage and soft tissues are normal.

IMPRESSION:
Bilateral bulky hila seen.
Prominent bronchovascular markings seen in both lung fields.
