Lab No.	012404040232	Age/Gender	51 YRS/MALE	Coll. On	04/Apr/2024 09:10AM
Name	Mr. HARMESH PAL			Reg. On	04/Apr/2024
Ref. Dr.				Approved On	04/Apr/2024 10:47AM
Rpt. Centre	Self,undefined			Printed On	05/Apr/2024 08:47AM

Test Name	Value	Unit	Biological Reference Interval
-----------	-------	------	-------------------------------

HbA1c (Glycosylated haemoglobin), EDTA whole blood <i>Method : HPLC</i>	5.50	%	< 5.7
Estimated average plasma Glucose <i>Method : Calculated</i>	111.15	mg/dL	65 - 136

The test is approved by NGSP for patient sample testing.

Interpretation:

Metabolically normal patients	%	< 5.7
Pre-diabetic	%	5.7 - 6.4
Diabetic	%	> 6.4

Glycosylated hemoglobin or HbA1c is a reliable indicator of mean plasma glucose levels for a period of 8-12 weeks preceding the date on which the test is performed and is a more reliable indicator of overall blood sugar control in known diabetic patients than blood sugar levels. A value of less than 5.7 % is usually seen in metabolically normal patients, however diabetics with very good control can also yield similar values. The HbA1c test, thus can not be used to differentiate between diabetic patients with very good control over the plasma glucose levels from metabolically normal, non-diabetic subjects as both groups may reveal very similar values in the assay.

Test Name	Value	Unit	Biological Reference Interval
-----------	-------	------	-------------------------------

TSH (Thyroid Stimulating Hormone), serum 3.82 uIU/ml 0.27 - 4.2
 Method : ECLIA

Interpretation:

1. Primary hyperthyroidism is accompanied by elevated serum FT3 and FT4 values alongwith depressed TSH levels.
2. Primary hypothyroidism is accompanied by depressed serum FT3 and FT4 values and elevated serum TSH levels.
3. High FT3 levels accompanied by normal FT4 levels and depressed TSH levels may be seen in T3 toxicosis.
4. Central hypothyroidism occurs due to pituitary or thalamic malfunction (secondary and tertiary hypothyroidism respectively). This relatively rare but important condition is indicated by presence of low serum FT3 and FT4 levels, in conjunction with TSH levels that are paradoxically either low/normal or are not elevated to levels that are expected.

The following ranges are recommended for pregnant females:

First trimester	uIU/ml	0.1 - 2.5
Second trimester	uIU/ml	0.2 - 3.0
Third trimester	uIU/ml	0.3 - 3.0

ULTRASOUND

Liver is normal in size ~12.3 cm and show raised echotexture. There is no focal hepatic lesion present. CBD is normal in course & caliber at porta hepatis. There is no calculus defined in the CBD. Intra hepatic biliary radicals are normal.
Gallbladder is partially distended. No calculus seen in lumen.
 Pancreas is normal in size & echopattern.
 Spleen is normal in morphology and echotexture.
 Both kidneys are normal in shape size contour & show normal echotexture with well maintained CMD. There is no hydronephrosis defined on left side. Both ureters are obscured by bowel gas. **A calculus ~ 3 mm is seen at upper pole of right kidney. A calculus ~ 4 mm is seen at mid pole of left kidney.**
Right grade 1 mild hydroureteronephrosis is seen due to lower ureteric and VUJ calculi ~ 4 and 3.7 mm respectively.
Bladder is minimally distended
Prostate size 30 cm, mild prostatomegaly.
 No mass is defined in bladder.
 There is no free fluid present in the abdomen.

Impression: Imaging features are suggestive of-

- Grade 1 fatty liver*
- Right grade 1 mild hydroureteronephrosis due to lower ureteric and VUJ calculi
- Bilateral renal calculi
- Mild grade 1 prostatomegaly
