REF. BY	: Dr. YASH	I BHARGAVA			
		HAEMATOLOGY			
Test Name		Test Results	Normal Range		
ESR		10 MM in 1st hr.	0-20 MM in 1st hr.		
		OTHER			
Glycosylated H	lb (HbA1C)				
TEST		VALUE	REFERENCE VALUE Excellent Control < 5.5%		
HBA1C		5.5 %	Good Control : 5.5 to 7.00% Fair Control : 7.00 to 8.00% Poor Control : > 8.0 %		
NOTE :-		HbA1C is done on the spot with the latest Nycocard Reader 2, a test based on specral reflectance. The assay used here is boronate affinity. Remember, the HbA1C is not the same as the glucose level. It is far superior to the blood glucose reading & it gives an average reading for the past 8-12 weeks.

### SUMMARY:

~~~~~~

T3 & T4 : Primary malfunction of the thyroid gland may result in excessive (hyper) or below normal (hypo) release of

------ T3 &T4. Disease in any portion of the thyroid - pituitary-hypothalamus system may influence the levels of

T3 & T4.

T4 levels are sensitive and superior indicator of hypothyroidism.

T3 levels better define hyperthyroidism , is an excellent indicator of the ability of thyroid to respond

to both

stimulatory and suppresive tests.

TSH : Circulating TSH levels are important in evaluating thyroid function. TSH is used in the differential diagnosis

of primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism. In primary

hypothyroidism, TSH levels are elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

In primary hyperthyroidism, T3 & T4 levels are elevated and low or undetctable TSH.
