Blood Grouping RH Typing *BL

Blood Grouping	"AB"
Rh (D) Typing	Positive

Methodology

This is done by forward grouping by Slide Agglutination method.

Interpretation

Newborns do not produce ABO antibodies until 2 to 6 months of age. So the blood group of the Newborn baby is done by ABO antigen grouping (forward grouping) only. Antibody grouping (reverse grouping) is not required. Confirmation of the New-born's blood group is indicated when the A and B antigen expression and the isoagglutinins are fully developed (i.e. 4 years).
