SAMPLE ID

THYROID FUNCTION TEST

Test Name	Result	Unit	Reference Range
TRIIODOTHYRONINE (T3)	180.12	ng/dl	60- 181
TETRAIODOTHYRONINE (T4)	5.2	ug/dl	5.01-12.45
ULTRA TSH	12.81	μIU/ml	0.55-4.78

Interpretation

TSH stimulates the production and secretion of the metabolically active thyroid hormones, thyroxine (T4) and triiodothyronine (T3), by interacting with a specific receptor on the thyroid cell surface. The synthesis and secretion of TSH is stimulated by Thyrotropin releasing hormone (TRH), the hypothalamic tripeptide, in response to low levels of circulating thyroid hormones. Elevated levels of T3 and T4 suppress the production of TSH via a classic negative feedback mechanism. Failure at any level of regulation of the hypothalamic-pituitary-thyroid axis will result in either underproduction (hypothyroidism) or overproduction (hyperthyroidism) of T4 and/or T3.

COMMENT

Kindly correlate clinically.
