X-RAY CHEST PA VIEW

Bony cage is normal.

Trachea is central.

C.P. angles are clear.

Cardiac contour and cardiothoracic ratio are normal.

Lung fields are clear.

DR.D.S.CHHABRA.

M.D.

MRS. AARTI KAUR**25 Yrs/F****BOB****08th Apr, 2023****ABDOMINAL SONOGRAPHY**

Liver is of normal size, shape, has smooth margins & regular contours and the parenchyma reveals normal echostructure. No focal lesion.

Gall bladder is of normal size, shape, has thin walls & the contents are clear fluid. No evidence of any calculus. Biliary tree is undilated.

Pancreas is normal, no focal / diffuse pathology. Spleen is normal.

Both kidneys are normal in size [measure about 10 cms. in length], shape and echostructure. No calculus in both. The collecting system and ureter on both side are undilated.

Urinary bladder is normal in size, shape and has thin walls.

Uterus is of multiparous size [measures about 9.5 x 5.5 x 3.5 cms. in diam.] and is normal in shape. The uterine outlines are smooth & regular and the myometrial & endometrial echopattern is normal. No mass.

Both ovaries are normal in size, shape and echostructure.

No adnexal / pelvic mass or cyst. No pelvic collection.

There is no ascitis. No obvious abdominal lymphadenopathy. No sub / supra diaphragmatic pathology on either side.

IMPRESSION :

Normal study.

**DR.D.S.CHHABRA.****M.D.**

LABORATORY REPORT

Name : AARTI	Sex/Age : Female / 33 Years	Case ID : 30401601830
Ref. By :	Dis. At :	Pt. ID :
Bill. Loc. : UNIQUE DIAGNOSTIC CENTRE INDORE		Pt. Loc. :
Reg Date and Time : 08-Apr-2023 13:26	Sample Type : Serum	Mobile No. :
Sample Date and Time : 08-Apr-2023 13:26	Sample Coll. By : non	Ref Id1 :
Report Date and Time : 08-Apr-2023 14:51	Acc. Remarks : -	Ref Id2 :

TEST	RESULTS	UNIT	BIOLOGICAL REF RANGE	REMARKS
Thyroid Function Test				
Triiodothyronine (T3) CMA	128.75	ng/dL	58 - 159	
Thyroxine (T4) CMA	7.6	µg/dL	5.5 - 11.0	
TSH CMA	H 18.983	µIU/mL	0.4 - 4.2	

INTERPRETATIONS

- Circulating TSH measurement has been used for screening for euthyroidism, screening and diagnosis for hyperthyroidism & hypothyroidism. Suppressed TSH (<0.01 µIU/mL) suggests a diagnosis of hyperthyroidism and elevated concentration (>7 µIU/mL) suggest hypothyroidism. TSH levels may be affected by acute illness and several medications including dopamine and glucocorticoids. Decreased (low or undetectable) in Graves disease. Increased in TSH secreting pituitary adenoma (secondary hyperthyroidism), PRTN and in hypothalamic disease thyrotropin (tertiary hyperthyroidism). Elevated in hypothyroidism (along with decreased T4) except for pituitary & hypothalamic disease.
- Mild to modest elevations in patient with normal T3 & T4 levels indicates impaired thyroid hormone reserves & incipient hypothyroidism (subclinical hypothyroidism).
- Mild to modest decrease with normal T3 & T4 indicates subclinical hyperthyroidism.
- Degree of TSH suppression does not reflect the severity of hyperthyroidism, therefore, measurement of free thyroid hormone levels is required in patient with a suppressed TSH level.

CAUTIONS

Sick, hospitalized patients may have falsely low or transiently elevated thyroid stimulating hormone. Some patients who have been exposed to animal antigens, either in the environment or as part of treatment or imaging procedure, may have circulating antianimal antibodies present. These antibodies may interfere with the assay reagents to produce unreliable results.

CONDITIONS OF REPORTING

1. All laboratory investigations have their limitations which are imposed by the limits of sensitivity and specificity of individual assay procedures as well as the quality of the specimen received by the laboratory. Isolated laboratory investigations never confirm the final diagnosis of the disease, but only help in arriving at a diagnosis in conjunction with clinical presentation and other related investigations.
2. The result(s) relate only to the sample(s) received.
3. The test report shall not be reproduced except in full, without written approval of the Neuberg Supratech Reference Laboratory (NSRL).
4. For any query in the report, it is suggested to contact the concerned laboratory personnel as suggested in the table to help carry out follow-up action (rechecking, repeat sampling, reflex/confirmatory testing, etc.). Neuberg Supratech Reference Laboratories (NSRL) follows a procedure of retaining & preserving samples after testing for a stipulated period. After the retention period of the sample, a fresh specimen is requested.
5. Report results are for the information of the referring doctor only.
6. For tests performed on specimens received from non - Neuberg Supratech Reference Laboratory (NSRL) locations (within and outside Indore) it is presumed that the specimen belongs to the patient named or identified, such verification having been carried out at the point of generation of the said specimen.
7. A test requested might yield 'INCOMPLETE RESULTS' for various technical reasons and this response will appear against the test name followed by detailed comment at the end of the report. It is expected that a fresh specimen will be sent for the purpose of reporting on the same parameter(s).
