CYTOLOGY

CYTOPATHOLOGY NO.: C-1136/22

SPECIMEN SUBMITTED: 3 Conventional cervical smears.

SPECIMEN ADEQUACY: Satisfactory for evaluation; Endocervical /transformation zone component present.

MICROSCOPIC EXAMINATION:

Squamous cell population:

- Superficial - Present.
- Intermediate - Present.
- Others - Blood present.
- Inflammation - Mild.
- Atypical cells - Not present.
- Background bacterial flora - Maintained.

INTERPRETATION:

- Negative for squamous intraepithelial lesion or malignancy.
- Inflammation with associated reactive cellular changes.

COMMENT:

1. The smears are reported using the Bethesda system (2014) for reporting cervical cytology.
2. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false-negative and false-positive results. Technologies such as liquid-based preparations may decrease but will not eliminate all false negative results. Follow-up of unexplained clinical signs and symptoms is recommended to minimize false-negative results.
3. In patients with squamous or glandular intraepithelial abnormalities, further diagnostic follow-up procedures, such as HPV testing, colposcopy / biopsy with endocervical sampling are suggested, as clinically indicated.
