CLINICAL CHEMISTRY

Test	Result	Unit	Biological Reference Interval
HbA1C			
HbA1c (HPLC)	5.6	%	Normal: 4.0-5.6 Prediabetes: 5.7-6.4 Diabetes: => 6.5 ADA standards 2019 (Carpenter/ Coustan)

HPLC pattern shows variant window., which may interfere with HbA1C value. In such cases, HbA1C is not a good indicator of diabetic control. Alternative method of testing is suggested. Hb HPLC is advised for characterization of the variants.

Estimated Average Glucose	-	-	-
---------------------------	---	---	---

Interpretation:

- HbA1C above 6.5% can be used to diagnose diabetes provided the patient has symptoms. If the patient does not have symptoms with HbA1C>6.5%, repeat measurement on further sample. If the repeat test result is <6.5%, consider as diabetes high risk and repeat measurement after 6 months.
- HbA1C measurement is not appropriate in diagnosing diabetes in children, suspicion of type 1 diabetes, symptoms of diabetes for less than 2 months, pregnancy, hemoglobinopathies, medications that may result sudden increase in glucose, anemia, renal failure, HIV infection, malignancies, severe chronic hepatic, and renal disease.
- Any sample with >15% should be suspected of having a haemoglobin variant.

Interpretations:
 (ADA Standards Jan 2017)
 FBS can be less than PPBS in certain conditions like post prandial reactive hypoglycaemia, exaggerated response to insulin, subclinical hypothyroidism, very lean/anxious individuals. In non-diabetic individuals, such patients can be followed up with GTT.
