DEPARTMENT OF BIOCHEMISTRY

Test Description	Observed Value	Unit	Method	Biological Ref. Interval
HbA1c(Glycated Haemoglobin)	4.3*	%	HPLC	Non diabetic level <=5.6 Risk of diabetes 5.7 - 6.4 Diabetes >= 6.5

REMARKS

In vitro quantitative determination of **HbA1c** in whole blood is utilized in long term monitoring of glycemia. The **HbA1c** level correlates with the mean glucose concentration prevailing in the course of the patient's recent history (approx - 6-8 weeks) and therefore provides much more reliable information for glycemia monitoring than do determinations of blood glucose or urinary glucose. It is recommended that the determination of **HbA1c** be performed at intervals of 4-6 weeks during Diabetes Mellitus therapy. Results of **HbA1c** should be assessed in conjunction with the patient's medical history, clinical examinations and other findings.

Mean Plasma Glucose 76.71 mg/dL

Mean Plasma Glucose is based on estimated Average Glucose (eAG) value calculated according to National Glycohemoglobin Standardization Program (NGSP) criteria.

Reference Range (HbA1c) :	Reference Range (Average Blood Sugar):	
Non diabetic level : <=5.6 %	Excellent control : 90 - 120 mg/dl	Action suggested : 181 - 210 mg/dl
Risk of diabetes : 5.7 - 6.4 %	Good control : 121 - 150 mg/dl	Panic value : > 211 mg/dl
Diabetes : >= 6.5 %	Average control : 151 - 180 mg/dl	

Note: Average blood sugar values is calculated from hba1c value and it indicates average blood sugar level over past three months.

Disclaimer: The test result mentioned here should be interpreted in view of clinical condition of the patient. In case of any clinical suspicion regarding any parameter, repeat test with fresh sample essential to conclude.
