Test Name	Value	Unit	Biological Reference Interval
-----------	-------	------	-------------------------------

BIOCHEMISTRY

HbA1c (Glycosylated haemoglobin), whole blood <i>Method : HPLC</i>	5.1	%	4.0 - 6.0
Estimated average plasma Glucose <i>Method : Calculated</i>	99.67	mg/dL	65 - 136

The test is approved by NGSP for patient sample testing.

Interpretation:

Metabolically normal patients	%	4.0 - 6.0
Good control:	%	< 7.0
Fair control:	%	7.0 - 8.0
Poor control:	%	> 8.0

Glycosylated hemoglobin or HbA1C is a reliable indicator of mean plasma glucose levels for a period of 8-12 weeks preceding the date on which the test is performed and is a more reliable indicator of overall blood sugar control in known diabetic patients than blood sugar levels. A value of 4-6 % is usually seen in metabolically normal patients, however diabetics with very good control can also yield similar values. The HbA1c test, thus can not be used to differentiate between diabetic patients with very good control over the plasma glucose levels from metabolically normal, non-diabetic subjects as both groups may reveal very similar values in the assay.

Test Name	Value	Unit	Biological Reference Interval
-----------	-------	------	-------------------------------

IMMUNOLOGY

TSH (Hypersensitive), serum 2.51 uIU/ml 0.27 - 4.2
 Method : ECLIA

Please note the change in reference ranges

Interpretation:

1. Primary hyperthyroidism is accompanied by elevated serum FT3 and FT4 values alongwith depressed TSH levels.
2. Primary hypothyroidism is accompanied by depressed serum FT3 and FT4 values and elevated serum TSH levels.
3. High FT3 levels accompanied by normal FT4 levels and depressed TSH levels may be seen in T3 toxicosis.
4. Central hypothyroidism occurs due to pituitary or thalamic malfunction (secondary and tertiary hypothyroidism respectively). This relatively rare but important condition is indicated by presence of low serum FT3 and FT4 levels, in conjunction with TSH levels that are paradoxically either low/normal or are not elevated to levels that are expected.

The following ranges are recommended for pregnant females:

First trimester	uIU/ml	0.1 - 2.5
Second trimester	uIU/ml	0.2 - 3.0
Third trimester	uIU/ml	0.3 - 3.0

***Disclaimer:** This is an electronically validated report, if any discrepancy found should be confirmed by user.
 This test was performed at Prognosis Laboratories, 515-516, Sector 19, Dwarka, New Delhi-110075.
