"we Case"

Jain Nagar, Opp. Sapphire Hotel, Yamuna Nagar Road, JAGADHRI - 135 003 (Har.)

(01732) -222560 • 297560

Patient Name :- Mr Nitish Anand age/sex:-31M

Date:- 14/11/2023 DR ANUJ KAMBOJ MD  
ULTRASOUND WHOLE ABDOMEN

- Liver is 14 cms in midclavicular line. It is hyperechoic, No focal/diffuse lesion seen, no mass lesion or calcification seen in parenchyma biliary radicals are normal, margins are smooth and Regular. portal venules are prominent.
- GB Distended well. Lumen shows no abnormality GB wall is normal
  - Portal vein & CBD are normal in caliber at porta.
  - Pancreas is normal in shape, size & appearance.
  - Spleen is normal, it measures 06 cms.
  - Kidneys RT LT
  - Size /Shape normal normal
  - Calculus/HN /mass :----- no Cal, H/N seen on either side
  - Cortico-medullary differentiation :----- Well maintained, B/L
  - Urinary bladder wall is normal. There is no evidence of calculus is seen.
  - Prostate is normal, no focal lesion seen
  - NO free fluid seen in abdomen
  - No evidence of para-aortic lymphadenopathy seen
  - No pleural effusion seen on either side.

IMPRESSION:-

NORMAL STUDY

## DEPARTMENT OF IMMUNOASSAY

Test Name	Result	Unit	Bio. Ref. Range	Method
-----------	--------	------	-----------------	--------

**THYROID PROFILE**

Sample Type : SERUM

Triiodothyronine Total (T3)	1.32	ng/mL	0.70-2.04	Chemiluminescence Immunoassay (CLIA)
Thyroxine Total (T4)	7.47	ug/dL	4.85-15.65	Electrochemiluminescence immunoassay (ECLIA)
TSH (4th Generation)	3.156	uIU/mL	0.38-5.33	Electrochemiluminescence immunoassay (ECLIA)

**PREGNANCY REFERENCE RANGE for TSH IN uIU/mL (As per American Thyroid Association.)**

1st Trimester	0.10-2.50 uIU/mL
2nd Trimester	0.20-3.00 uIU/mL
3rd Trimester	0.30-3.00 uIU/mL

**INTERPRETATION:**

- Primary hyperthyroidism is accompanied by elevated serum T3 & T4 values along with depressed TSH level.
- Primary hypothyroidism is accompanied by depressed serum T3 and T4 values & elevated serum TSH levels.
- Normal T4 levels accompanied by high T3 levels and low TSH are seen in patients with T3 thyrotoxicosis.
- Normal or low T3 & high T4 levels indicate T4 thyrotoxicosis ( problem is conversion of T4 to T3)
- Normal T3 & T4 along with low TSH indicate mild / subclinical HYPERTHYROIDISM .
- Normal T3 & low T4 along with high TSH is seen in HYPOTHYROIDISM .
- Normal T3 & T4 levels with high TSH indicate Mild / Subclinical HYPOTHYROIDISM .
- Slightly elevated T3 levels may be found in pregnancy and in estrogen therapy while depressed levels may be encountered in severe illness , malnutrition , renal failure and during therapy with drugs like propranolol.
- Although elevated TSH levels are nearly always indicative of primary hypothyroidism . rarely they can result from TSH secreting pituitary tumours ( secondary hyperthyroidism )

\*TSH IS DONE BY ULTRASENSITIVE 4th GENERATION CHEMIFLEX ASSAY\*

**COMMENTS:**

Assay results should be interpreted in context to the clinical condition and associated results of other investigations. Previous treatment with corticosteroid therapy may result in lower TSH levels while thyroid hormone levels are normal. Results are invalidated if the client has undergone a radionuclide scan within 7-14 days before the test. Abnormal thyroid test findings often found in critically ill clients should be repeated after the critical nature of the condition is resolved. The production, circulation, and disintegration of thyroid hormones are altered throughout the stages of pregnancy.
