(ALT/SGPT) , SERUM

**Comment:**

ALT elevations are noted in liver parenchymal diseases, leading to injury / destruction of hepatocytes.

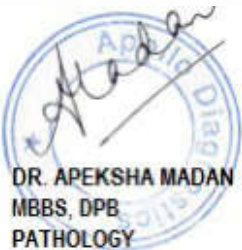

ALT levels are seen to be elevated even before the signs and symptoms of the liver injury appear.

The ALT levels remain high longer in blood as compared to AST levels. And though both the enzymes increase in liver injury, the rise in ALT is more compared to AST, thus also altering the ALT:AST ratio.

**(ALT/SGPT) , SERUM**

**Comment:**

ALT elevations are noted in liver parenchymal diseases, leading to injury / destruction of hepatocytes.

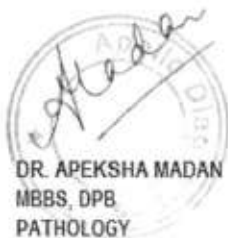

ALT levels are seen to be elevated even before the signs and symptoms of the liver injury appear.

The ALT levels remain high longer in blood as compared to AST levels. And though both the enzymes increase in liver injury, the rise in ALT is more compared to AST, thus also altering the ALT:AST ratio.
