Patient ID:	000028327	Patient Name:	ANWESHA CHOUDHURY
Age:	27 Years	Sex:	F
Accession Number:		Modality:	US
Study Date:	08-Apr-2023	Study:	BREAST
Referring Physician:	DR P KR SAIKIA		

HIGH RESOLUTION USG OF BOTH BREASTS AND AXILLAE :

A well marginated hypoechoic nodular lesion measuring 20 x 19 mm is seen at 8 o' clock position of right breast.

Left breast shows normal echotexture and fibroglandular architecture corresponding to age.

Nipple-areolar complex shows normal echoanatomy.

Retro-mammary areas are normal.

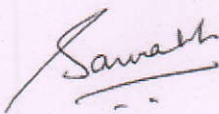

No definite solid or cystic mass lesion is noted within the left breast.

Skin and subcutaneous tissues are normal.

No evidence of enlarged intramammary or axillary lymphnode is seen on either side.

Impression :

- **Nodule in the right breast – Fibroadenoma**

Date: 08-Apr-2023 11:45:25
