**Creatinine**

Clinical Significance:

Serum creatinine is inversely correlated with glomerular filtration rate (GFR). Increased levels of Serum Creatinine is associated with renal dysfunction.

**Urine Routine & Microscopic Examination**

Urine routine examination and microscopy comprises of a set of screening tests that can detect some common diseases like urinary tract infections, kidney disorders, liver problems, diabetes or other metabolic conditions. Physical characteristics (colour and appearance), chemical composition (glucose, protein, ketone, blood, bilirubin and urobilinogen) and microscopic content ( pus cells, epithelial cells, RBCs, casts and crystals) are analyzed and reported.

**Blood Group**

Blood group ABO & Rh test identifies your blood group & type of Rh factor. There are four major blood groups- A, B, AB, and O. It is important to know your blood group as you may need a transfusion of blood or blood components; you may want to donate your blood; before or during a woman's pregnancy to determine the risk of Rh mismatch with the fetus.

**Complete Blood Count (CBC)**

CBC comprises of estimation of the cellular components of blood including RBCs, WBCs and Platelets. Mean corpuscular volume (MCV) is a measure of the size of the average RBC, MCH is a measure of the hemoglobin content of the average RBC and MCHC is the hemoglobin concentration per RBC. The red cell distribution width (RDW) is a measure of the degree of variation in RBC size (anisocytosis) and is helpful in distinguishing between some anemias. CBC examination is used as a screening tool to confirm a hematologic disorder, to establish or rule out a diagnosis, to detect an unsuspected hematologic disorder, or to monitor effects of radiation or chemotherapy. Abnormal results may be due to a primary disorder of the cell-producing organs or an underlying disease. Results should be interpreted in conjunction with the patient's clinical picture and appropriate additional testing

performed.

**Erythrocyte Sedimentation Rate (ESR)**

The erythrocyte sedimentation rate (ESR) is a simple but non-specific test that helps to detect inflammation associated with conditions such as infections, cancers, and autoimmune diseases.

SPO<sub>2</sub> - 97

Allergies:

History & Complaints:

Examination:

The pt presented today for a G/P/E and eye check up. He reports no current complaints.

P/H/- Hx of road accident in 2011 left leg fractured as a result.

Provisional/Final Diagnosis:

Drug Orders:

System - No complaints of pain or discomfort.  
eye/ No issues with vision reported.

Nutritional Screening:

Pupil equal, round reactive to light; extraocular movement is intact; wears glasses with a prescription of 2.0, visual acuity without glasses is 6/9.

Advice:

(Lifestyle / Rehab / Diet)

muscle and m. oral issues a result; no history of diabetes, asthma, cough, P<sub>1</sub>S<sub>2</sub> were. No alcohol, smoke, Res of G/L, A/E ↑.

Follow up:

Date:

Time:

Contact:

Name & Signature of The Consultant with Stamp:

Investigations:  
Abat. Soft No clubbing or edema, ext. No  
Aman is in good health, overall.  
Advice. To continue wearing glasses as prescribed.  
No further investigation needed at this time.
