K.F.T

KFT are simple tests that measure certain substances in your blood and urine. These substances are related to filtration in kidneys, which give an idea of kidney function. These tests mainly detect levels of serum creatinine and blood urea nitrogen, which are done through a blood test. A 24-hour urine sample may be taken to detect creatinine clearance from the body and filtration rate of the kidneys. There are other parameters like protein, albumin, minerals, electrolytes, etc., which may also be checked, depending on the type of kidney tests.

Pregnancy	
1st Trimester	0.25-4.33
2nd Trimester	0.43-6.61
3rd Trimester	0.38-6.22

- Not : 1. TSH levels are subject to circadian variation, reaching peak levels between 2-4 a.m . and at a minimum between 6- 10 pm. The variation is of the order of 50 % , hence time of the day has influence on the measured serum TSH concentrations.
2. Recomendated test for T3 and T4 each unbound fraction or free levels as it is metabolically active.
3. Physiological rise in total T3/T4 levels is seen in pregnancy and in Pregnancy and in Patients on steroid therapy.

- Clinical use :
- Primary Hypothyroidism
 - Hyperthyroidism
 - Hypothalamic - Pituitary Hypothyroidism
 - Inappropriate TSH secretion
 - Non thyroidal illness
 - Autoimmune thyroid disease
 - Pregnancy associated thyroid disorders
 - Thyroid dysfunction in infancy and early childhood
