*** BIOCHEMISTRY**

TEST NAME	RESULTS	UNIT	REFERENCE RANGE
<u>CREATININE, SERUM</u>			
* SERUM CREATININE	0.62	mg/dL	0.6 - 1.1
METHOD	Enzymatic Colourimetric Method		

Creatinine is critically important in assessing renal function. In blood, it is a marker of glomerular filtration rate. As the kidneys become impaired for any reason, the creatinine level in the blood will rise due to poor clearance of creatinine by the kidneys. Abnormally high levels of creatinine thus warn of possible malfunction or failure of the kidneys.
