25 HYDROXY CHOLECALCIFEROL (VIT D3)

TEST	RESULT	UNITS	NORMAL VALUES
25 (OH) VITAMIN D	34.563	ng / ml	Severe Deficient : <10 ng/ml Deficient : <20 ng/ml Insufficient : 20~30 ng/ml Sufficient : 30-100 ng/ml Potential Toxicity : >100 ng/ml Potential Toxicity >100 ng/ml

METHOD CLIA

Interpretation :

1. Testing for 25(OH)vitamin D is recommended as it is the best indicator of vitamin D nutritional status as obtained from sunlight exposure & dietary intake. For diagnosis of vitamin D deficiency it is recommended to have clinical correlation with serum 25(OH)vitamin D, serum calcium, serum PTH & serum alkaline phosphatase.
2. During monitoring of oral vitamin D therapy - suggested testing of serum 25(OH)vitamin D is after 12 weeks or 3 mths of treatment. However, the required dosage of vitamin D supplements & time to achieve sufficient vitamin D levels show significant seasonal (especially winter) & individual variability depending on age, body fat, sun exposure, physical activity, genetic factors (especially variable vitamin D receptor responses), associated liver or renal disease, malabsorption syndromes and calcium or magnesium deficiency influencing the vitamin D metabolism. Vitamin D toxicity is known but very rare. kindly correlate clinically, repeat with fresh sample if indicated.
