

Patient Name: Mr. GANESH BABU

M /36 Yrs

Ref. by: MEDIWHEEL HEALTHCARE

Date: -23/03/2024

SONOGRAPHY OF ABDOMEN AND PELVIS

TECHNIQUE: Real time, B mode, gray scale sonography of the abdominal and pelvic organs was performed with convex transducer.

LIVER: The liver is normal in (11cm) size, shape and has smooth margins. The hepatic parenchyma shows homogeneous echotexture without solid or cystic mass lesion or calcification. No evidence of intrahepatic biliary radical dilatation.

PORTAL VEIN: It measures 8.7 mm in transverse diameter.

GALL BLADDER: The gall bladder is well distended. There is no evidence of calculus, wall thickening or pericholecystic collection.

COMMON BILE DUCT: The visualised common bile duct is normal in caliber. No evidence of calculus is seen in the common bile duct. Terminal common bile duct is obscured due to bowel gas artifacts.

PANCREAS: The head and part of body of pancreas is normal in size, shape, contours and echo texture. Rest of the pancreas is obscured due to bowel gas artifacts.

SPLEEN: The spleen measures 10.4 cm and is normal in size and shape. Its echotexture is homogeneous.

KIDNEYS:

Right kidney	Left kidney
9.3 x 4.3cm	9.4 x 5cm

The kidneys are normal in size and have smooth renal margins. Cortical echotexture is normal. The central echo complex does not show evidence of hydronephrosis. No evidence of hydroureter or calculi, bilaterally.

URINARY BLADDER: The urinary bladder is well distended. It shows uniformly thin walls and sharp mucosa. No evidence of calculus is seen. No evidence of mass or diverticulum is noted.

.....Continue On Page 2

PROSTATE: It measures about 2.8 x 2.8 x 3.1 cm; volume is 13 gm. The prostate gland shows well defined and smooth margins. The prostatic echotexture is normal and homogeneous.

There is no ascites. There is no obvious evidence of significant lymphadenopathy.

IMPRESSION:

- No significant abnormality is seen.

Thanks for the reference.

With regards,

Dr. Ravi Kumar

 Patient : MR GANESH BABU R
 Age/sex : 36 Yrs/ Male
 Center : APEX HOSPITALS KANDIVALI
 Ref. By : Self

 Sample ID : 24036634
 Reg. Date : 23/03/2024
 Report Date : 23/03/2024
 Case No. :

HBA1C-GLYCOSYLATED HAEMOGLOBIN

Test Description	Result	Unit	Biological Reference Range
HbA1c- (EDTA WB)	5.4	%	< 5.6 Non-diabetic 5.7-6.4 Pre-diabetic > 6.5 Diabetic
Estimated Average Glucose (eAG)	108.28	mg/dL	
Method : HPLC-Biorad D10-USA			

INTERPRETATION

- HbA1c is used for monitoring diabetic control. It reflects the estimated average glucose (eAG).
- HbA1c has been endorsed by clinical groups & ADA (American Diabetes Association) guidelines 2017, for diagnosis of diabetes using a cut-off point of 6.5%.
- Trends in HbA1c are a better indicator of diabetic control than a solitary test.
- Low glycated haemoglobin (below 4%) in a non-diabetic individual are often associated with systemic inflammatory diseases, chronic anaemia (especially severe iron deficiency & haemolytic), chronic renal failure and liver diseases. Clinical correlation suggested.
- To estimate the eAG from the HbA1C value, the following equation is used: $eAG(mg/dl) = 28.7 \times A1c - 46.7$
- Interference of Haemoglobinopathies in HbA1c estimation.
 - For HbF > 25%, an alternate platform (Fructosamine) is recommended for testing of HbA1c.
 - Homozygous hemoglobinopathy is detected, fructosamine is recommended for monitoring diabetic status
 - Heterozygous state detected (D10/ Tosho G8 is corrected for HbS and HbC trait).
- In known diabetic patients, following values can be considered as a tool for monitoring the glycemic control.
 - Excellent Control - 6 to 7 %
 - Fair to Good Control - 7 to 8 %
 - Unsatisfactory Control - 8 to 10 %
 - and Poor Control - More than 10 %.

Note : Haemoglobin electrophoresis (HPLC method) is recommended for detecting hemoglobinopathy
